## CLIQ<sup>®</sup> Key-Based Digital Access

Where mechanical reliability  
meets digital intelligence

Experience a safer  
and more open world

Modern organizations face growing pressure to improve security, meet compliance requirements, and manage access flexibly across people, places, and times.

CLIQ bridges the gap between traditional mechanical locking and electronic access control – combining the familiarity of a key with the power of digital management.

It is a wire-free, key-based digital access management system where intelligence is inside the key. Access rights are programmable, traceable, and can be time-restricted, while installation remains fast, simple, and non-invasive.

**With CLIQ, you digitalize with confidence and get your access ready for what's ahead.**

# Why CLIQ?

## Controlled access

Grant, change, or revoke access rights in seconds, at any time and from anywhere. Lost keys can be blocked immediately, without replacing cylinders.

## Greater compliance

Built-in audit trails show who accessed which door and when – supporting regulations such as NIS2 and internal security policies.

## No wiring, no disruption

CLIQ cylinders are battery-free and powered by the key itself. Installation requires no cabling, drilling, or structural changes – ideal for retrofitting.

## Future-ready security

Encrypted communication, proprietary microchip technology, and scalable software protect against physical and cyber threats.

## Lower total cost of ownership

CLIQ delivers significant long-term value by eliminating the need for rekeying, cylinder replacement, and time-consuming manual administration.

# The CLIQ family

## eCLIQ – Maximum digital flexibility

- Fully electronic, scalable locking solution for digital control
- One mechanical key profile with advanced electronic coding
- Maintenance-free operation for up to 200,000 cycles
- Ideal for organizations which need traceability and flexibility

**Best suited for commercial buildings, healthcare, education, offices, and multi-site organizations**

## ABLOY PROTEC<sup>2</sup> CLIQ – The perfect hybrid solution

- Combines PROTEC<sup>2</sup> mechanical security with CLIQ electronics
- Multiple mechanical key profiles plus electronic coding
- Manages mechanical and digital cylinders within one system
- Custom-made cylinders for demanding industrial applications

**Best suited for critical infrastructure, utilities, industrial sites, and other environments requiring enhanced mechanical strength**

# One system – all access points

*With CLIQ, one programmable key can operate almost any access point. More than 60 cylinder and padlock variants ensure a perfect fit for indoor, outdoor, and harsh environments – including critical infrastructure.*

**Interior and exterior doors**

**Mailbox systems**

**Gates and outdoor containers**

**Machines and control panels**

**Elevators**

**Parking barriers**

**Server racks**

**Cabinets and lockers**

# Designed for every stakeholder

## For facility & security managers

- Reduce risk, liability, and hidden costs
- Simplify audits and compliance reporting
- Centralize access management across sites

## For system administrators

- Instantly block lost keys and program new ones
- Add time restrictions and key revalidation
- Manage access on-site, remotely, or via cloud

## For installers

- Fast, wire-free installation on existing hardware
- Simple cylinder replacement without door damage
- No need to change cylinders when keys are lost

## For users

- One familiar key for almost every access point
- Optional Bluetooth® updates via smartphone
- Seamless transition from mechanical keys

# Simple, intuitive management

*Whether you run a small business with only a few access points or manage a complex, multi-site organization with thousands of users, there is a CLIQ software solution designed to meet your needs.*

## For small businesses

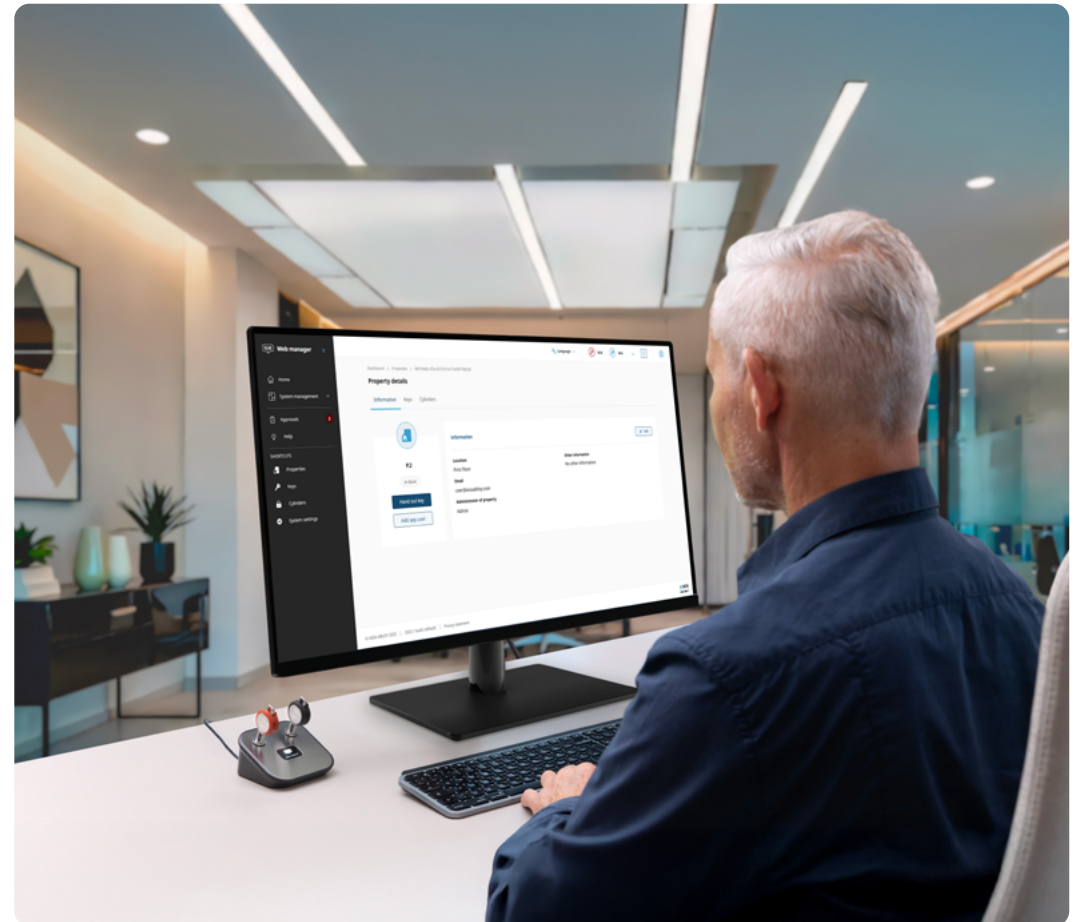

Manage your CLIQ system on the fly with the CLIQ Go app. Ideal for sites with a limited number of access points and straightforward security needs.

## For small to medium-sized businesses

The CLIQ Local Manager on-site software gives you full control of users, keys, and access rights from a central workstation.

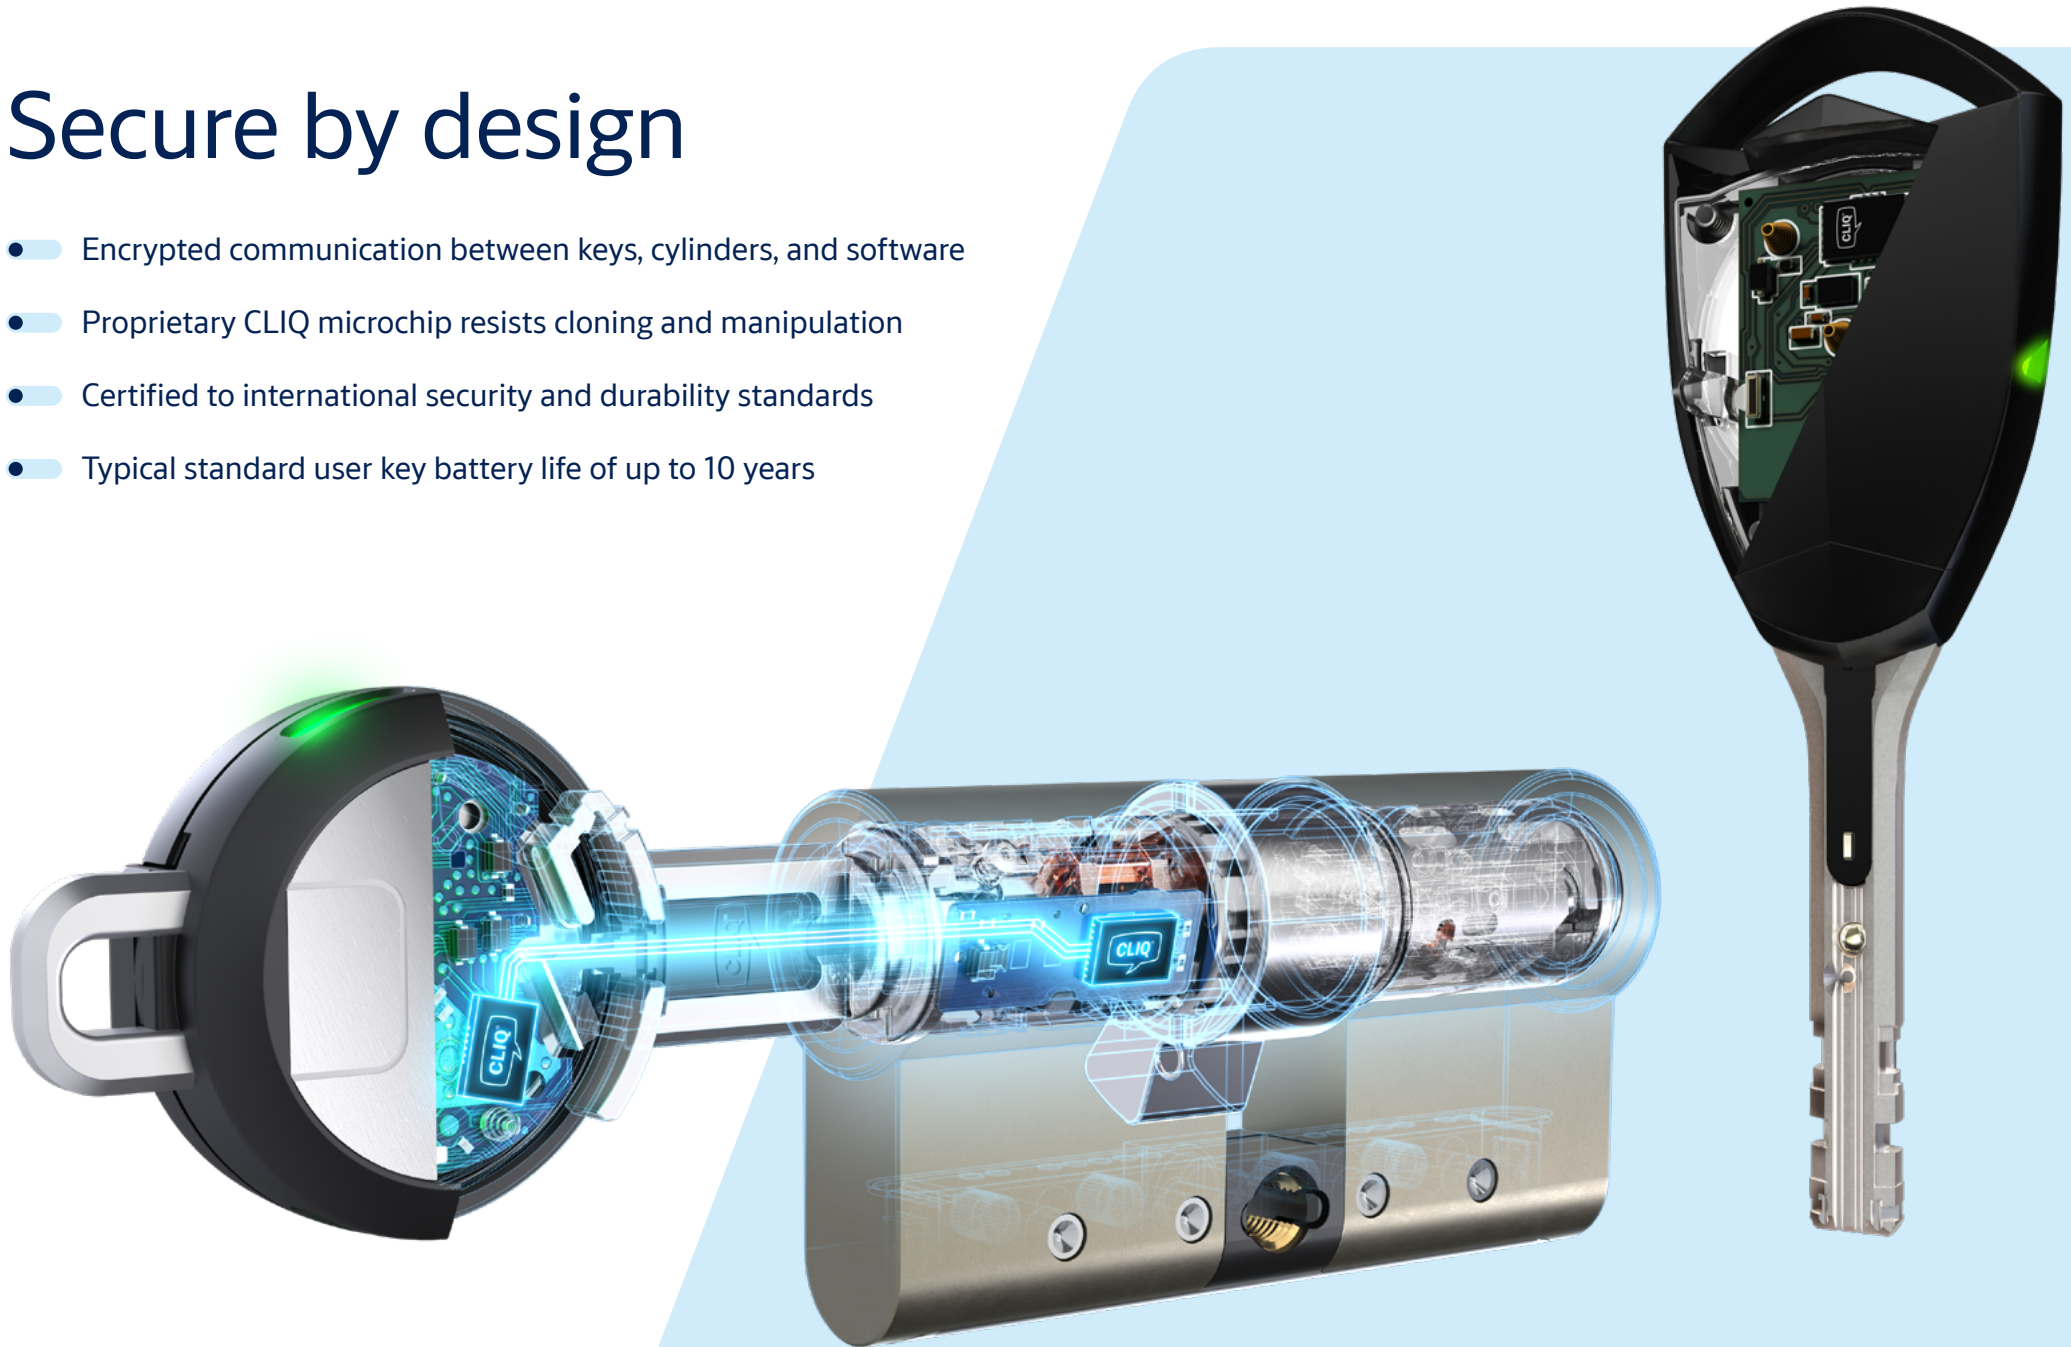

## For large or complex organizations

Manage access rights anytime, from anywhere. CLIQ Web Manager web-based administration combined with Bluetooth-enabled keys and the CLIQ Connect app enables flexible, remote updates. Multiple hosting options and additional services are available to support enterprise-level applications.

# Secure by design

- Encrypted communication between keys, cylinders, and software
- Proprietary CLIQ microchip resists cloning and manipulation
- Certified to international security and durability standards
- Typical standard user key battery life of up to 10 years

# Sustainable and efficient

- No mains power or cabling required
- Battery-powered for energy efficiency
- Minimal installation impact on buildings
- Fewer site visits and reduced maintenance
- Supports organizational sustainability goals

# Trusted across Europe and beyond

For more than two decades, organizations across Europe and global markets have trusted CLIQ to secure their most critical assets, people, and infrastructure. From life-saving emergency services to large-scale entertainment venues, CLIQ delivers dependable, scalable, future-ready access management.

# The smart way to digitalize access

CLIQ empowers organizations to move from mechanical to digital access at their own pace – without compromising reliability, usability, or security.

Whether deployed as a fully digital solution with eCLIQ or as a hybrid system with ABLOY PROTEC<sup>2</sup> CLIQ, it delivers confidence today and flexibility for tomorrow.

**Make your access ready for what's ahead – with CLIQ.**
