

Aperio® Offline – Access control with no wiring

In combination with online readers/doors it is possible to install **additional doors with Aperio Offline devices** - all access rights are stored on RFID credentials via the online access control system.

- User gets new and updated user rights from the EAC system
- Door alarms like "Low battery" or „Lock jammed“ get transported back to the EAC system via user credentials
- For security reasons user credentials have adjustable validity times
- Office mode (permanent open via schedule) / Toggle mode (Change lock state with single card presentation)
- Support up to 16 schedules
- Void list function ensures higher security level (black-list)
- Aperio Offline devices can be easily converted to Aperio Online devices without hardware changes

Supported RFID technologies
