

# Integra access solution

**KESO**

**ASSA ABLOY**

Future-proof, modular, comprehensive

Experience a safer  
and more open world

A man in a blue suit and white shirt is shown in profile, looking down at a door handle. He is holding a blue keychain with a silver key. The door is dark with a silver handle and lock. The background is dark with large, light-colored geometric shapes (hexagons and lines) overlaid. The text "The contemporary design meets your high aesthetic requirements." is written in white at the bottom right.

The contemporary design  
meets your high  
aesthetic requirements.

## All advantages integrated in one system: Integra is as individual as your wishes

Founded in 1963, KESO develops and produces the pioneering KESO locking systems in Switzerland – since 2002, KESO is under the ASSA ABLOY umbrella, the world's leading manufacturer of locking and security systems. We offer everything for optimum door safety and functionality.

The Integra digital access solution has a modular design and can be extended infinitely like a honeycomb system. With the online variant, you can for example, add, change or revoke access privileges with just a few clicks – giving you the maximum flexibility.

Integra functions in simple to highly complex installations. Whether for a single door or a complete system: With Integra, you can easily add digital functions to your existing mechanical locking system or equip complete new buildings.

**Maximum security is offered by three different versions, as stand-alone, offline and online solutions**

With Integra you are completely free: You can keep parts of your mechanical system and still manage it through the digital systems software.

You avoid  
**messy** cable paths  
thanks to the **compact electronic housing**  
that is mounted on the **Integra Cylinder.**

## Security is so simple:

The Integra cylinders save time, money and a great deal of effort

With Integra everything is already contained in the cylinder. Integra cylinders are easily inserted without additional modification to the door. This makes installation really simple and saves time and money. The batteries are designed to provide up to 60,000 locking cycles and can easily be replaced during operation.

The purely digital programming allows you to block lost keys immediately; the granting of locking authorisation is flexible and access is documented. The security of your system is always guaranteed without having to replace a cylinder.

Integra's chip communication is based on the latest technologies, making it hacker-proof.

### Robust, versatile and in a modern design - a medium for all access solutions:

- Whether the solution is mechanical, mechatronic or digital
- For time recording, for cashless payment at vending machines etc
- The key is available in 13 different colours
- Waterproof badge

Everything is under control:  
Access can be tracked and the authorisation for particular doors  
can be awarded temporarily.

## Security meets flexibility:

The Integra digital cylinders are well prepared for all current and even future demands

The Integra digital cylinders are very versatile – whether networked online or as a single-door solution. With their modern, visually attractive design, the digital cylinders fit perfectly in every door.

The digital cylinders are simply inserted in the door without additional modification and can therefore be easily exchanged. This avoids reworking of the door hardware or the door itself and cuts costs enormously.

### Networked, future-oriented and discreet:

- Authorisation immediately recognisable:  
Optical feedback of the access signals
- Wide range of uses:  
also suitable for fire doors
- Easy assembly and installation

### Integra is suitable for the following types of buildings:

- Businesses:  
Small, medium and large companies and corporations
- Public buildings:  
Municipalities, police, utilities, hospitals, care facilities, schools, airports and public transport
- Buildings frequented by many visitors:  
Shopping centres, stadiums, museums, concert halls, hotels
- Military and sensitive facilities:  
Barracks, administration buildings, critical infrastructures

With MyIntegra you have your  
digital key with you always.  
on your smartphone.

## An app as a digital key: MyIntegra

Everyone will be familiar with the situation:  
You are on the road and making a phone call  
with your smartphone, then you come to a lo-  
cked door in the building. Up until now, this has  
been the moment when the search for the key or  
badge begins with the free hand.

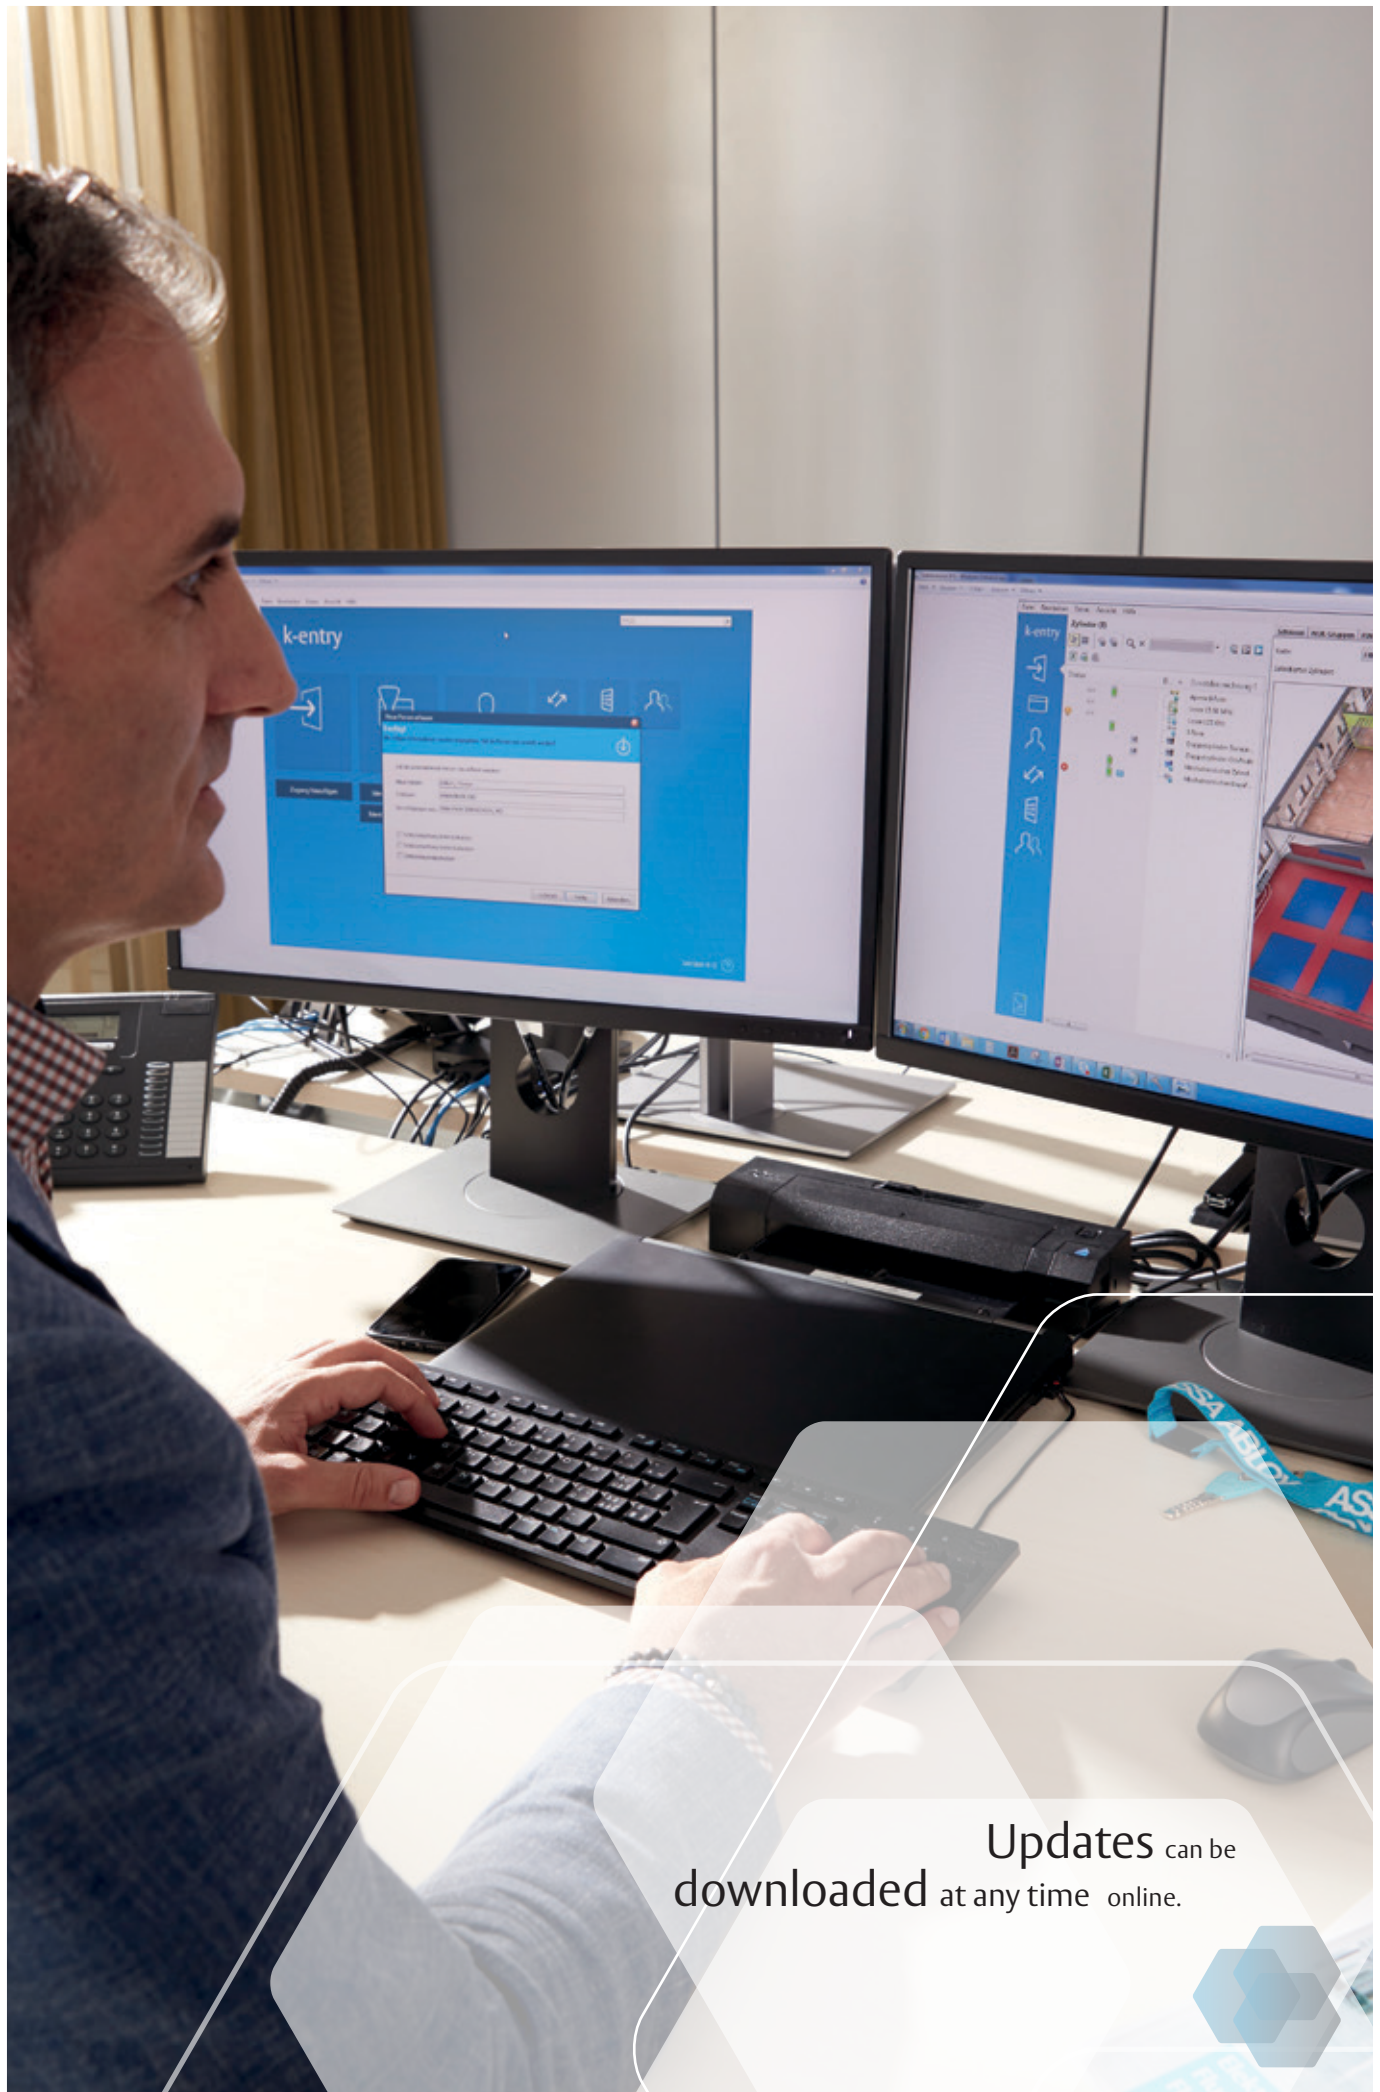

That's now a thing of the past, because with the  
MyIntegra app you have your digital key on your  
smartphone wherever you are.

With MyIntegra, users will be able to use their  
smartphone to open all the doors to which they  
have access authorisation, eliminating the need  
to carry one or several keys.

### The advantages at a glance:

- Fewer physical keys reduce resource consumption
- Ideal for guests or service providers who can easily get temporary access
- Go through all authorised doors quickly and easily
- Highly suitable for organisations with decentralized buildings and service operations

Updates can be  
downloaded at any time online.

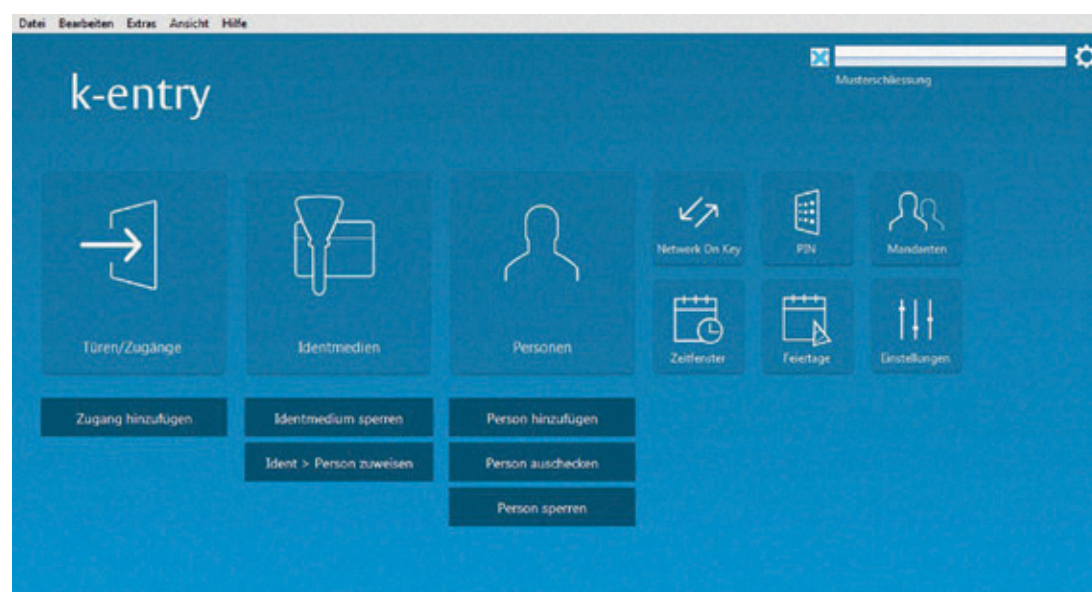

## Transparency and security are combined: k-entry® manages any system

You only need one software to manage your Integra access solution: k-entry®. This allows you to manage your existing mechanical system as well as your digital solution.

No matter how comprehensive your system is or how you extend your system, you can manage everything with just one software.

### Time-saving, well-organised and self-explanatory:

- Depiction in the building plan
- Clear main menu

The ASSA ABLOY Group is the global leader in access solutions. Every day we help people to feel safer and more secure and to experience a more open world.
