

KESO 8000Ω³

Trust meets innovation:
Next generation of active copy protection
for even greater security

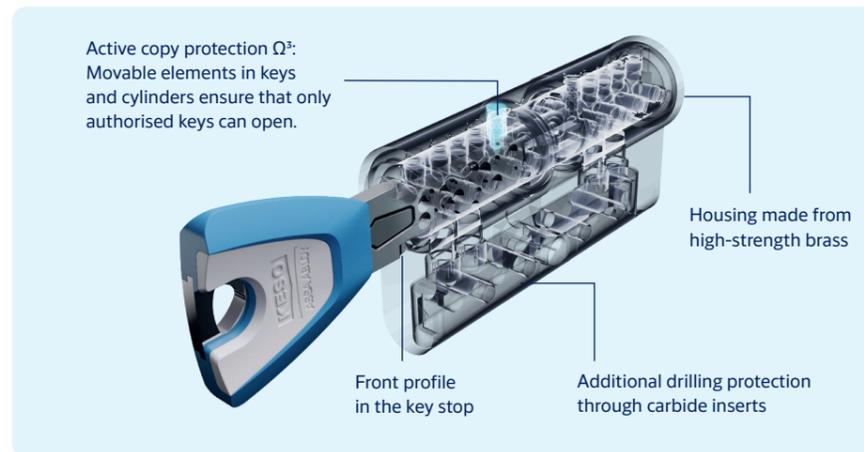

Mechanics is our DNA, innovation is what drives us

KESO 8000Ω³ combines the advantages of the predecessor models in a groundbreaking update: Spring-loaded elements in keys and cylinders are queried on several levels during key operation. Thanks to patent protection until 2044, your investment in a secure locking solution is optimally protected.

Upgrade KESO 8000: Ω² becomes Ω³

Further development of the copy protection technology in the key requires additional moving elements in the cylinder.

For complex locking systems in residential buildings, hospitals, universities, companies and public institutions.

Innovations and advantages at a glance

- Guaranteed patent and investment protection until 2044
- Active copy protection Ω³
- Modular system for flexible adaptation to the relevant door thickness
- Scalable system enables complex locking systems
- Swiss quality with the highest precision
- Opening only with authorised original keys
- Certified security and flexible integration in KESO Integra
- Flexible adaptation to different requirements

Convenience Copy protection Security Drill-open protection Pulling protection Breakaway protection

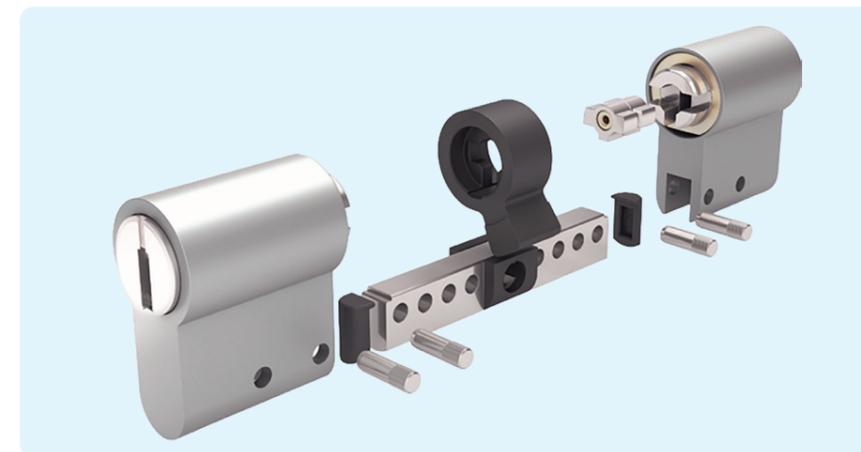

Patented active copy protection Ω³

The patented active copy protection guarantees that only KESO 8000Ω³ keys can open the intended cylinders, making it one of the most secure locking systems on the market.

- Illegal key copies are extremely difficult to make
- A double query takes place in the cylinder
- No freely available key blanks on the market

Investment protection through patent until 2044

The high-end KESO 8000Ω³ product with patent protection until 2044 prevents illegal key copying. This ensures that every single blank is logged with active copy protection.

Modular system

Cylinder can be extended or shortened thanks to the modular design of the round cylinder (CH) and the Euro profile cylinder. Depending on the door thickness, the cylinder can be adapted directly on site at the customer's premises.

Mechanical meets mechatronic

In combination with the mechatronic KESO Integra locking solution, the system can be scaled from offline to online, entirely according to existing requirements.

The colour cap range with 13 different colours makes it easy to visually organise the keys and allows for colour personalisation of the keys.
