

A suite of connected ASSA ABLOY devices controls access to French media headquarters

ASSA ABLOY
Opening Solutions

Experience a safer
and more open world

Challenge

For new headquarters in a Paris suburb, Canal+ wanted a completely connected smart building to enable efficient, flexible working

Project:

Company: Canal+ (www.canalplus.com)

Segment: Office/Corporate

Location: Issy-les-Moulineaux, Paris

Access control system: Genetec

ASSA ABLOY devices installed: Aperio® H100

Wireless Handles & ABLOY Electromechanical Locks

Year of installation: 2021

"As soon as we discuss access systems, all service providers tell me about ASSA ABLOY products"

Abdeljelil Saidi,
Director of Safety and Security,
Vivendi/Canal+ Group

Abloy locks add an extra level of security to external doors

Aperio H100: The award-winning H100 fits access control inside a slimline door handle

In addition to streamlining their working environment, Canal+ takes particular care to green interior and exterior spaces – as well as to indoor air quality and exposure to natural light – in order to reduce the building's energy consumption.

Key requirements for selecting new access control products included:

- Filtering access to all technical areas of the building, for 1,200 employees plus visitors and contractors
- No-compromise protection at multiple types of door, both internal openings and external / emergency exits
- Seamless integration with a Genetec access management system, so users only carry one credential for convenience
- Access control devices which offer high performance in both security and sustainability criteria

Launched in 1984, Canal+ was France's first pay-to-view TV channel and is now part of the multinational Vivendi Group

Solution

ASSA ABLOY's wide range of access control devices enabled Canal+ to deploy the right solution for every opening

Genetec's Synergis access control system

"We plan to equip new Vivendi Group sites and not just the Canal+ headquarters"

Abdeljelil Saidi,
Director of Safety and Security,
Vivendi/Canal+ Group

All ABLOY electromechanical locks at Canal+ integrate seamlessly with the Genetec platform. This offers high mechanical resistance at vulnerable points such as emergency exits. *"Abloy electromechanical locks are robust and efficient,"* says M. Saidi.

Fast-growing demand for integrated building systems makes it critical for hardware suppliers to offer a range of compatible solutions. ASSA ABLOY's broad competence enables them to match devices to every application.

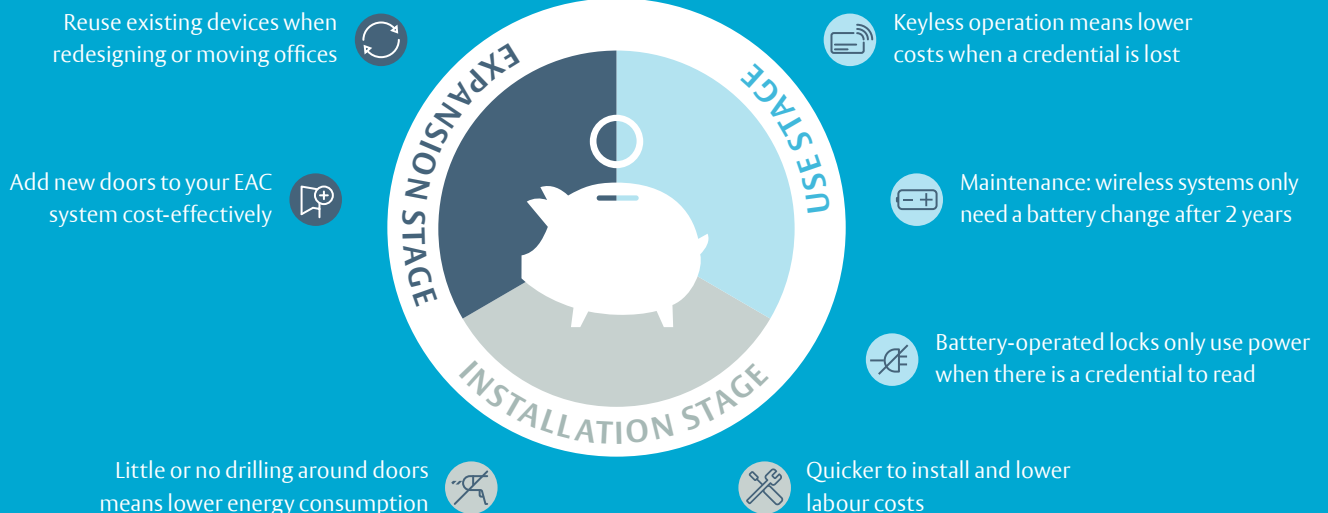

To secure interior doors, Canal+ chose the award-winning Aperio H100 Wireless Handle. This battery operated device combines security with contemporary aesthetics and a minimal footprint.

This integration gives employees the flexibility and convenience of carrying one multisite credential.

Like every Aperio device, H100 is fitted without wiring, which saves doors from installation damage. It works without mains power, consuming much less energy than a traditional wired door lock.

From their integrated Genetec control panel, administrators issue, amend or withdraw access to individual users or rooms. H100 handles connect with a smart building system to prevent unauthorized intrusion into sensitive areas.

Energy-efficiency and cost savings opportunities with Aperio

About ASSA ABLOY

The ASSA ABLOY Group is the global leader in access solutions. Every day, we help billions of people experience a more open world.

ASSA ABLOY Opening Solutions leads the development within door openings and products for access solutions and homes, businesses and institutions. Our offering includes doors, door and window hardware, locks, access control and services.
