

Jakkuvärkki Dog Forest

Keyless access to the dog forest brings convenience to users and owners

Jakkuvärkki Dog Forest is an area intended for dog outdoor activities in Pori, Finland, in the village of Viasvesi. The fenced area of 4.3 hectares enables a relaxing and species-specific outdoor moment even for more active dogs.

Starting point

The recent increase in the number of pet and hobby dogs is also evident in the growth of new services aimed at dogs and dog owners. So-called dog forests can already be found in several cities, and the Pori region in Finland has also received its own fenced outdoor and play areas.

When designing the locking and access management system for Jakkuvärkki Dog Forest, the starting point was to make the booking, use, and management of the facilities as easy as possible for both users and owners. In addition to flexibility and user safety, another issue to be solved was electricity: the closest electrical connections in the Dog Forest area are located about one and a half kilometers away.

Solution

An automated electronic booking and access management system enables the use of the Dog Forest around the clock without the presence of owners, using a simple book-pay-open model.

Thanks to the integration of keyless ABLOY CUMULUS locking and the Asio-Data booking system, no physical keys or access cards are needed: once the user has booked a time on the website, they receive a virtual key in the ABLOY CUMULUS mobile app, which can be used to unlock the main gate's CUMULUS padlock during the reserved time.

The ABLOY CUMULUS padlock, powered by batteries and equipped with Bluetooth® connectivity, works anywhere, enduring even demanding conditions.

"Because running the dog forest is a part-time job for us, everything has to work as easily and automatically as possible. Thanks to the solution, we don't have to be there to open the gates in the middle of the day or to worry about key management; we can trust that the system works and is always up to date. The cooperation was very flexible: when Asio-Data recommended Abloy's solution to us, Abloy came to demonstrate the system and its operation on-site. This further facilitated decision-making."
