

SMARTair® *i-volution* One small change that changes everything

Style, Intelligence and Robutness come together
in the new SMARTair electronic lock

ASSA ABLOY
Opening Solutions

Experience a safer
and more open world

Responsive, modern security, inside and out

i-volution, the new SMARTair lock, combines the advanced access control features of an electronic escutcheon with the intelligence and superior security of the electromechanical lock.

i-volution is compatible with all SMARTair systems (STA, OFF, UOC, OPENOW and WIR) and mobile access control solutions (Openow and TESA SMARTair Remote app).

New RFID reader module design, offered in several colours. Includes a warning LED in blue, green and red.

Any DIN-compliant handle is compatible with the new SMARTair Lock. Handle turns freely when door is closed.

A mechanical half cylinder can be added for emergency mechanical key opening.

Bluetooth communication and Wireless online reporting with 1-2 year battery autonomy.

Button for electronic privacy is always included.

EURO profile mortise lock includes a battery-powered electromechanical clutch.

Automatic deadbolt projection (2.54cm) and panic function.

Includes sensors which register the following events:

- Door left open
- Door incorrectly closed
- Intrusion
- Mechanical cylinder use

Your Environment, Your Lock

Designed to meet the access control needs of high traffic doors

i-volution, the SMARTair wireless, battery-powered electronic lock is built for anywhere with high traffic volumes, like universities, school, hospitals, co-working spaces, offices, residence blocks, public buildings... It works with every SMARTair management option, online or offline.

i-volution is perfect for doors where, for security reasons, convenient features of an electromechanical lock are required (including door position monitoring).

This device also suits facilities where a minimalist lock design is preferred. Your new SMARTair Lock can be combined with any type of standard handle and makes access control safer, simpler and more efficient — reducing wasted time and expense.

Practical and convenient

- Safeguards security in intelligent environments with high traffic and a large number of access events.
- The lock integrates easily with your existing SMARTair access control system.
- Facility managers can make real-time decisions and react instantly to any on-site event.
- Has been designed for fast and easy installation in environments where day-to-day cannot pause.

Openow™ Compatible with all forms of intelligence

Welcome to the future of access control. *i-volution* also offers a new way to open doors: using the Openow™ mobile app. Your site users no longer carry separate credentials, just their smartphone. Security and facility managers boost their efficiency, sending, cancelling and modifying virtual keys whenever they choose.

We put at your disposal our expert team

We trust you have found this SMARTair brochure convenient. If you would like to receive more information about SMARTair, click the link below and shortly one of our local experts will put in touch with you.

Our technical consultant will help you to:

- Raise security at your facility
- Reduce costs
- Learn how other businesses are taking advantage of wireless access control
