**ASSA ABLOY**  
Entrance Systems

ASSA ABLOY Entrance Systems

Experience a safer  
and more open world

*The ASSA ABLOY SL Intrusion Protection System offers enhanced security against forced entry & vandalism.*

## Technical specifications

### PROFILE TYPE

- Aluminium framed doors with interlocking profiles, multi-point locating pins and floor track.

### PROFILE FINISH

- Anodised or powder coated aluminium.

### GLASS TYPE

- 9.52mm security laminated safety glass.

### OPERATOR TYPE

- ASSA ABLOY SL 500 with strengthened electromechanical locking system and unique anti-lift technology.

If your business operates from a public storefront, you might be experiencing a sense of vulnerability due to the absence of the added protection offered by being situated within a larger building. With innovative security technology integrated into the SL Intrusion Protection door, you can immediately enhance your security protocols due to the following features:

### Advanced tri-locking mechanisms

Securing your door in three critical areas:

1. Strengthened electromechanical locking system at the top of the door.
2. Interlocking door profiles and locating pins on the leading door edges.
3. A bolstered tracking system recessed in the floor with door frame inserts.

The implementation of these three mechanisms will ensure that your door cannot be pushed inward, pried apart, or forcibly opened, delivering optimal security and peace of mind.

### AssaultGuard™ glass as standard

The framing of the sliding doors and sidelights incorporates AssaultGuard™ glass, featuring a thicker interlayer that maintains its structural integrity and functions as a barrier, even when subjected to repeated impacts from bricks and other substantial objects.

### Cutting-edge safety

The ASSA ABLOY SL 500 operator features an integrated activation and safety presence system which detects people or objects in the doorway, preventing the door from closing until it is safe to do so. This same system can be used to detect after hours intruders and activate visual deterrents or monitored alarm systems.

### Building management system integration

Detect possible security risk via optional advanced monitoring that seamlessly connects with your building management system to provide monitoring of door position, lock status as well as various security-based alerts, including bank mode and loitering detection.
