

ASSA ABLOY expertise ensures
every opening at a large
campus has the right solution

ASSA ABLOY
Opening Solutions

Experience a safer
and more open world

"ASSA ABLOY has many access solutions in relation to openings in the building, including door closers. I am happy that our project specification team was able to offer the appropriate solutions for our customers' requirements."

Avi Kimhazi, AAIL Managing Director

Openings Studio™

ASSA ABLOY provide end-to-end support, from specification to installation and beyond

Company: Amdocs (amadocs.com) a global business founded in Israel

Type: Communications technology company

Project: Amdocs sought trustworthy specification and BIM support for construction of their new Park campus-style in Ra'anana, where building was completed in 2023. This large site required door closing solutions tailored to several hundred doors of different sizes, types and uses. The project was managed using BIM principles from the outset.

Year of installation: 2023

Segment: Corporate

ASSA ABLOY hardware supplied: ASSA ABLOY Products like Door Closers, Electric Strikes, Handles, Panic Exit devices, Automatic door operators, Plates and Doors Stops and more

Key project challenges

- Coordinate information between a wide range of stakeholders including the client, designers and construction managers
- Provide full support for choosing, supplying and installing closing solutions for hundreds of doors at the campus
- Offer Amdocs closing solutions which can equip all types of door: single- and double-leaf, fire doors, public doors and more

Solution

ASSA ABLOY's specification team became a hub for coordinating and disseminating up-to-date information for every door site. Providing timely and accurate specifications ensured supply and installation hit the timelines which Amdocs' construction managers required. They remained connected with the project for after-sales support. Openings Studio™ has also been a key tool for everyone involved in the project's BIM process. This user-friendly software ensures accurate specification data is logged and, when approved, transmitted to the live Revit® design. By receiving detailed specifications, updated digitally, designers could visualize door solutions accurately — and ensure the right closing solution is specified for each opening. Because every stakeholder can have Openings Studio access, they were able to work transparently with accurate, up-to-date specifications.

The vast range of available ASSA ABLOY Door Closers ensures every opening at Amdocs' large campus is equipped with its ideal solution. Certifications including fire compliance help to remove regulatory worries for building specifiers and facilities managers. The range includes Cam-Motion® Door Closers for several applications: Pushing force required to open a door falls rapidly, ensuring barrier-free access for all, plus secure closing to keep the premises safe.
