Building stronger trade partnerships

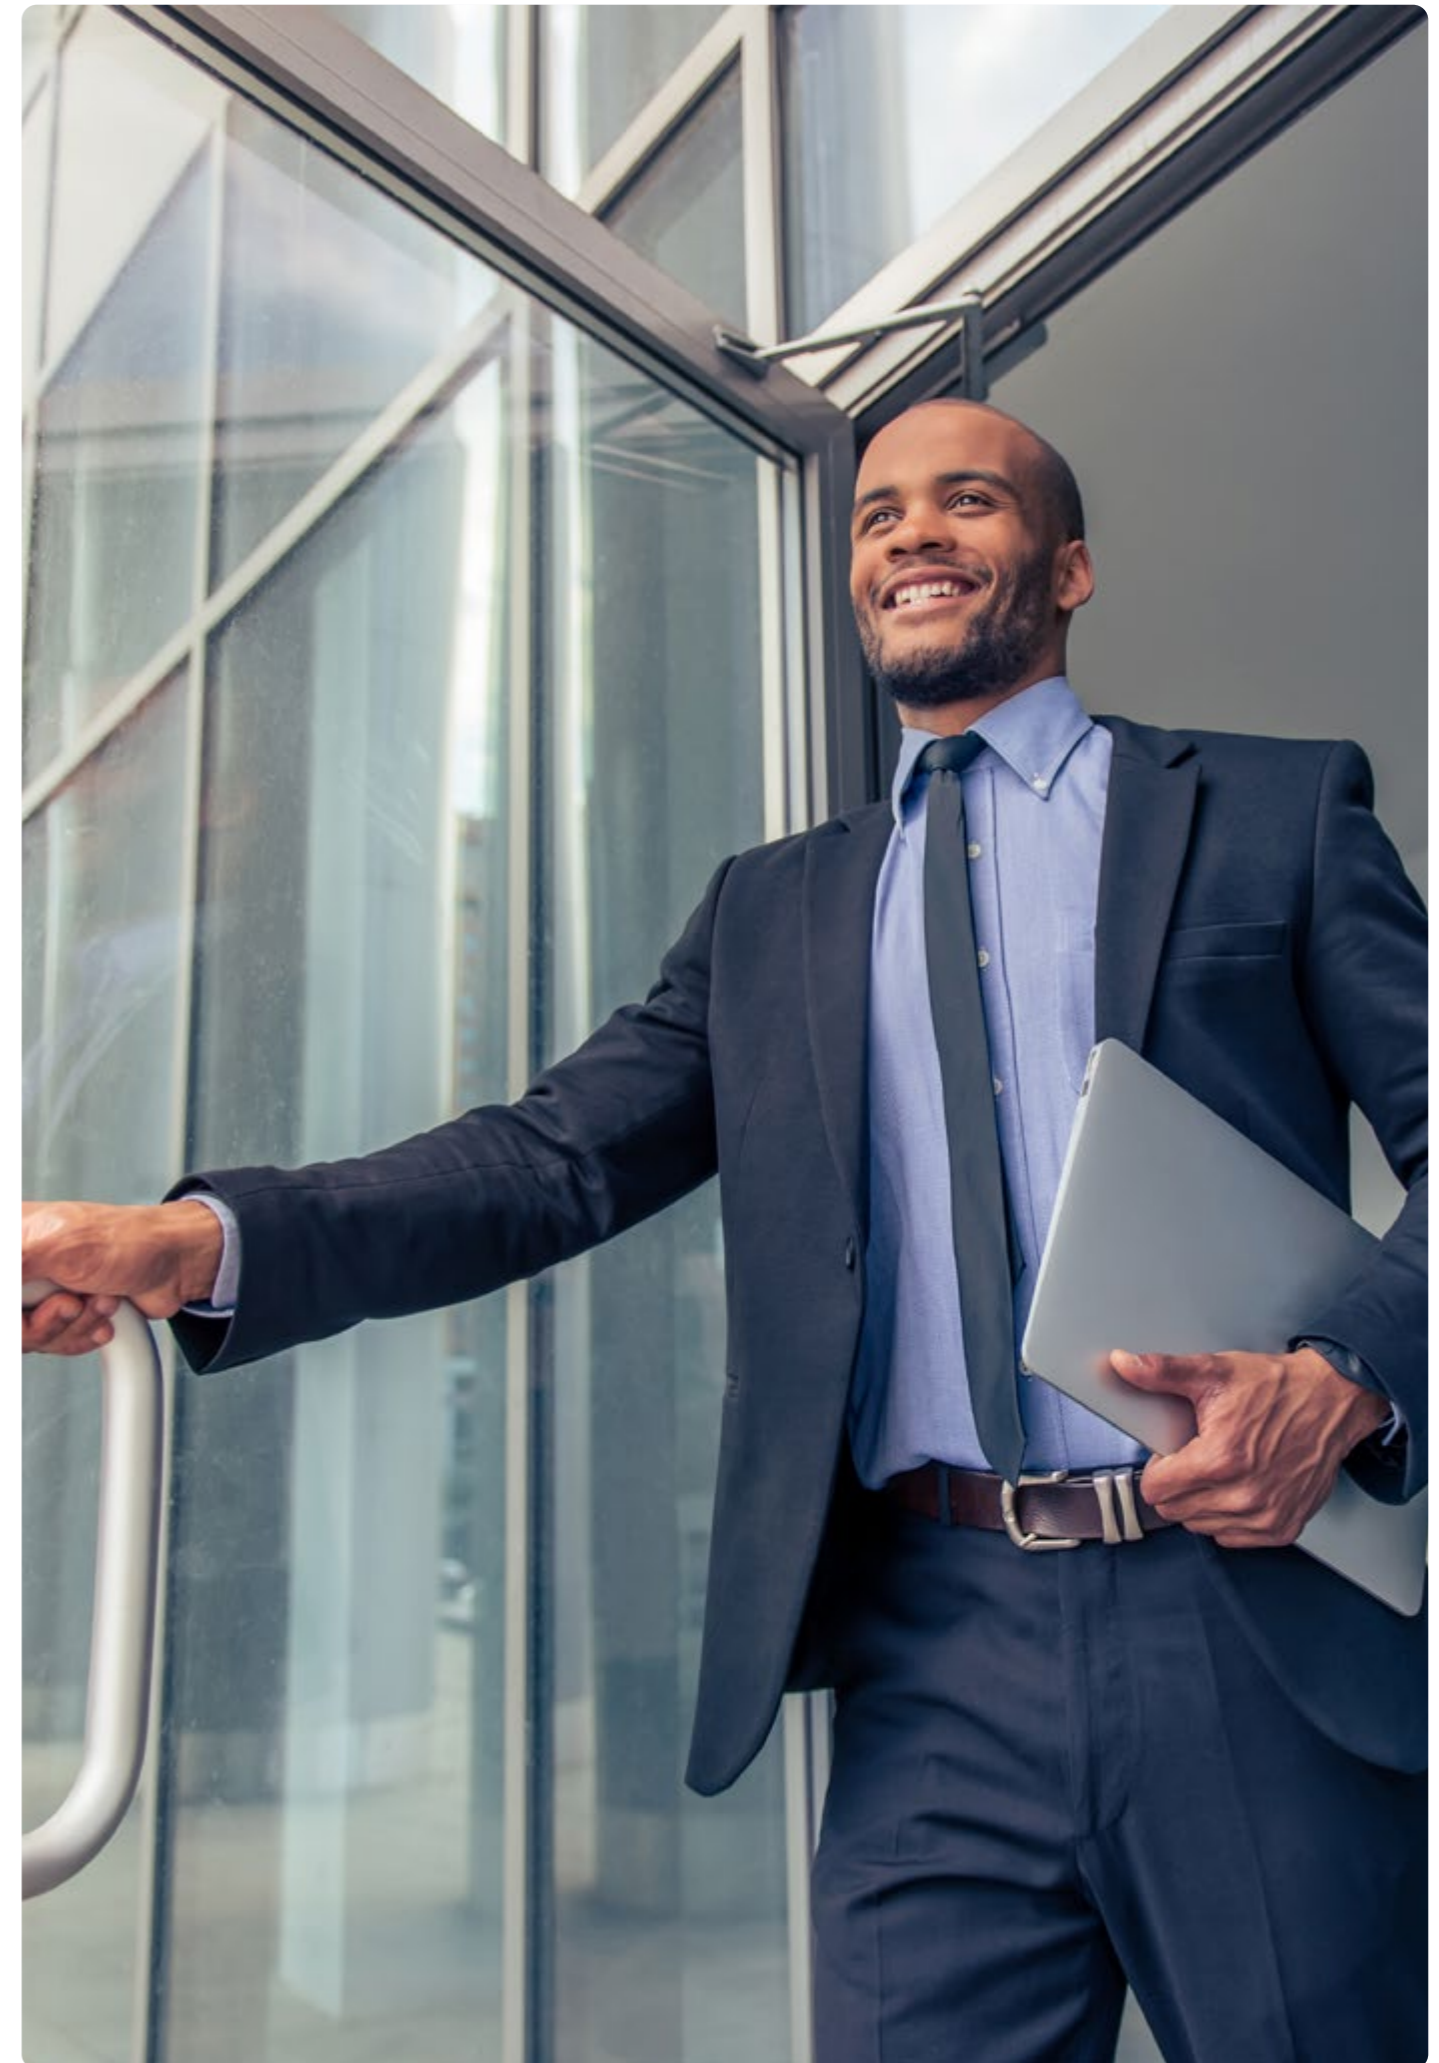

Opening every project to clarity, confidence and long-term performance.

At ASSA ABLOY, we believe successful projects are built on strong, collaborative partnerships. The Trade Partner Programme has been created to support professionals who want more than reliable doorsets — they want expert guidance, trusted technical support and a partnership that adds value at every stage.

Designed for demanding sectors across commercial, healthcare, education, logistics and high-security environments, our programme helps partners deliver safer, smarter and more efficient buildings through certified products and dependable service.

Sustainability at the Core

We are committed to reducing environmental impact across the entire service lifecycle. Through responsible sourcing, Environmental Product Declarations (EPDs) and alignment with BREEAM and LEED, we help partners meet sustainability goals without compromising safety or performance.

Introducing the trade partner programme

The ASSA ABLOY Trade Partner Programme is built to support you at every stage — from specification and ordering to installation and long-term building performance. As a partner, you gain access to certified products, smarter digital tools and expert guidance designed to help you deliver consistent, compliant results.

Programme overview

Industry-leading products

Certified steel and timber doors engineered for fire, security, acoustic and specialist performance.

Smarter digital tools

Openings Studio™ and Design4Doors enable accurate specification, fast quoting and full digital compliance records.

Dedicated partner support

Access technical advice, installation guidance, CPD training and direct support from a dedicated account manager.

Confidence in every project

Clear guidance from planning to installation to help you work efficiently, reduce risk and deliver consistent results.

Why partner with ASSA ABLOY

As a Trade Partner, you gain access to a range of benefits designed to support your business, strengthen project delivery and help you work smarter across every stage of your workflow. From commercial advantages to technical expertise and digital support, our partnership is built to provide real, measurable value.

Accelerate Your Business Growth

Gain a competitive advantage with exclusive pricing, qualified project leads and co-marketing opportunities. These benefits help you secure more work, strengthen client relationships and grow your brand visibility.

Build with Confidence

Deliver safer, more accountable buildings with full lifecycle traceability, expert fire door inspection support and guidance that keeps you aligned with the latest compliance requirements.

Tap into World-Class Expertise

Work with a global leader in door solutions. Access technical support, CPD-certified training and dedicated account management — trusted by partners across the UK and Ireland.

Comprehensive Support Services

Ensure long-term performance with UK-wide service coverage, priority maintenance and independently tested products, all backed by our UKAS-accredited lab.

Smarter Tools for Smarter Work

Streamline your workflow with digital specification tools such as Openings Studio™ and Design4Doors. Benefit from precise quoting, customised door solutions and reduced project risk.

Smarter, Sustainable Building

Work with a manufacturer committed to sustainability. Our doorsets are engineered for durability and energy efficiency, certified to ISO 14001, and supported by digital twin and lifecycle tracking tools.

Doorsets designed for real-world demands

● Powershield steel doorsets

High-performance steel doors, windows, and glazed screens engineered for strength, security, and long-lasting performance.

- **Personnel doors** built for durability and everyday use
- **Insulated external doors** for enhanced thermal performance
- **Fire-rated doors** (E30–E120 / EI30–EI120) to BS EN 13501-2
- **Security doors** tested to LPS 2081 & LPS 1175
- **Specialist options** including cleanroom, acoustic (up to 45dB), blast, ballistic and fire-rated glazing

● Safeguard timber doors

High-performance timber doors engineered for security, ballistic protection and blast resistance across high-risk environments.

- **High-security timber doorsets** for critical infrastructure
- **LPS 1175-rated** security (up to Level 4)
- **Ballistic protection** to BS5051, FB4 & EN 1522-1523
- **Blast resistance** tested beyond 1000 kPa-ms
- **Specialist timber solutions** for extreme threat applications

Our portfolio brings together steel and timber doors engineered for demanding environments—combining UK-based manufacturing with rigorous testing and third-party accreditation, and delivered through the Powershield, Prima, Safeguard, and SMARTec families.

● PRIMA steel doorsets

High-security steel doorsets engineered for commercial environments requiring robust protection and long-lasting performance.

- **High-security steel doorsets** for demanding applications
- **Durable steel construction** for strength and reliability
- **Certified security performance** for critical infrastructure
- **Overhead door options** for larger openings
- **Roller shutters** for additional perimeter protection

● SMARTec timber doorsets

High-performance timber doorsets combining strength, durability, and the natural warmth of real wood for commercial environments.

- **Timber personnel doors** with robust construction and premium aesthetics
- **Fire-rated timber doors** tested to BS 476-22 & EN 1634-1 (Q-Mark certified)
- **Acoustic timber doors** delivering up to 35dB sound reduction
- **54mm SMARTec door cores** for enhanced performance
- **Versatile timber solutions** for commercial applications

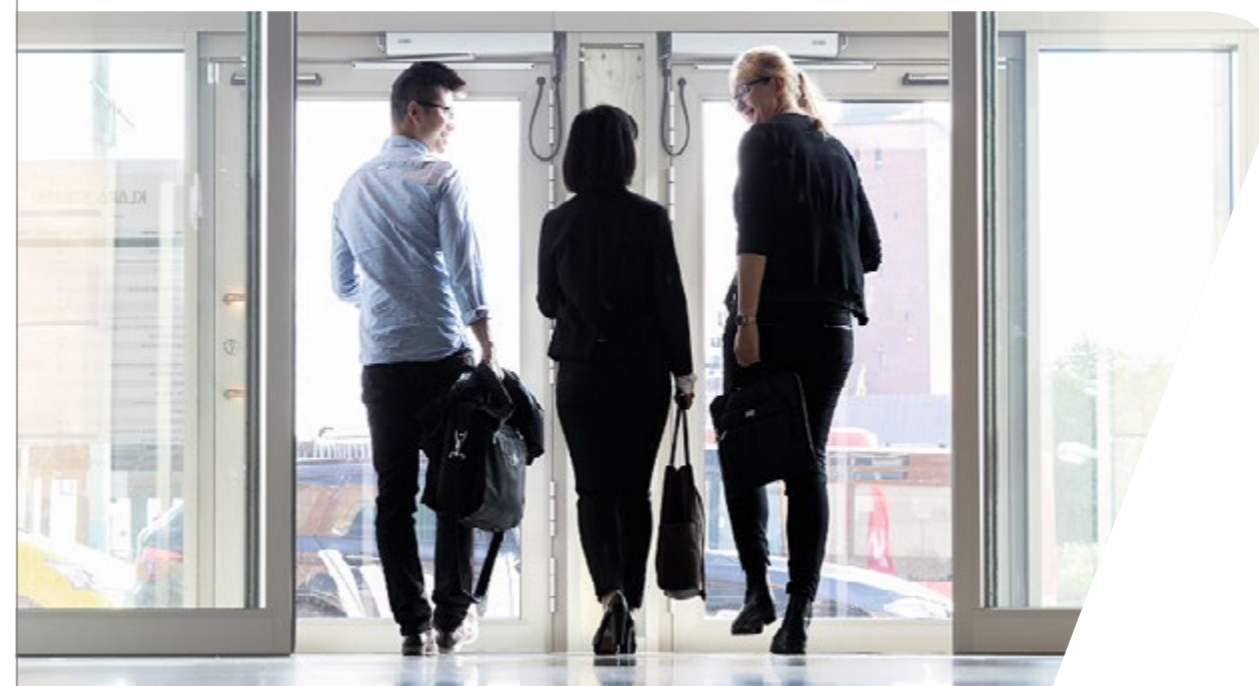

Our steel and timber doorsets are engineered to deliver dependable, certified performance across a wide range of environments — from fire protection and acoustic control to security, hygiene and specialist high-risk applications.

Door solutions for every application

Modern buildings demand solutions that perform reliably in every situation. Our doorsets are independently tested to British and European standards, delivering consistent performance across commercial, healthcare, education, infrastructure and secure environments. Each system is engineered for durability, safety and long-term reliability, providing assured performance throughout the building lifecycle — even in high-traffic or mission-critical spaces.

From fire protection and acoustic comfort to security, hygiene and specialist containment, our portfolio is built to meet diverse performance requirements. With flexible design options, a wide range of ratings, and configurations that span fire, security, personnel, cleanroom, acoustic, glazed, custodial and high-risk environments, our doorsets offer complete clarity when selecting the right solution for any application.

Our doorsets are supported by UK-based manufacturing, rigorous quality control and a commitment to continual product development. This ensures every solution performs as specified and remains reliable throughout its service life.

Fire doors

Certified fire protection that safeguards people, property and critical operations.

Fire doors are essential to life safety, helping to contain fire and smoke, protect escape routes and maintain compartmentation throughout a building. Our steel and timber fire doorsets are independently tested to British and European standards, with fire-resistance ratings of up to 4 hours for steel and up to FD120 for timber.

Designed to deliver long-term stability and dependable performance, each doorset is engineered to minimise fire

spread, support safe evacuation and reduce damage to critical assets. A broad choice of sizes, finishes, glazing options and configurations ensures your fire-door solution integrates seamlessly with the wider building design.

As part of a complete doorset, each fire-door system is supplied with certified hardware and clear documentation to support compliant installation and ongoing inspection. This provides consistent performance and greater confidence in meeting regulatory and insurance requirements.

Tested & certified

Independently tested to BS and EN standards, with fire-resistance ratings up to 4 hours (steel) and FD120 (timber).

Life-safety protection

Designed to contain fire and smoke, supporting safe evacuation and limiting damage.

Compliance confidence

Meets UK Building Regulations and Certifire-approved for added assurance.

Versatile applications

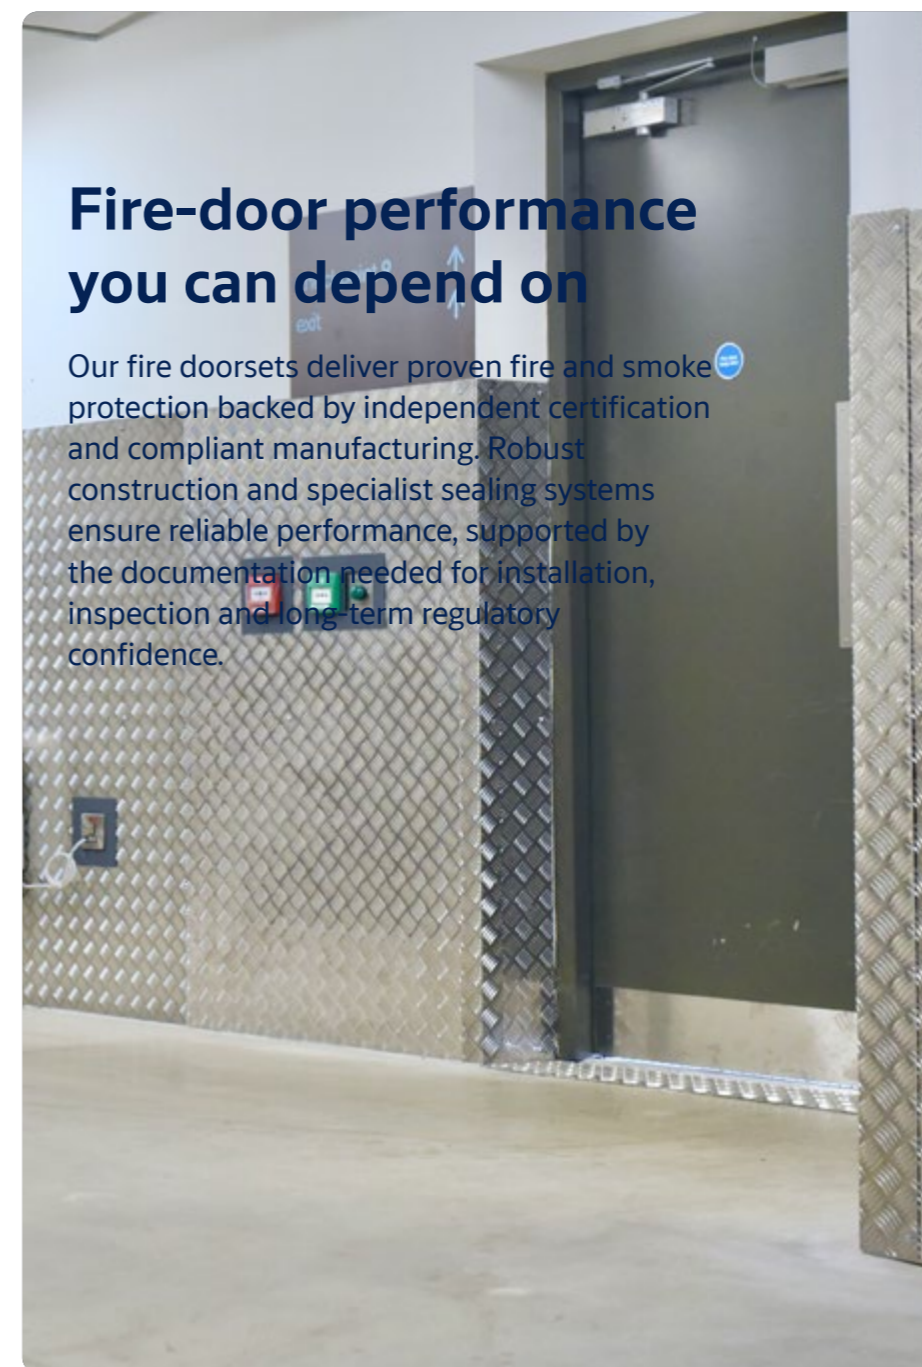

Suitable for hospitals, schools, offices, residential, industrial and infrastructure projects.

Design flexibility

Available in a wide range of sizes, finishes and glazing options.

Fire-door performance you can depend on

Our fire doorsets deliver proven fire and smoke protection backed by independent certification and compliant manufacturing. Robust construction and specialist sealing systems ensure reliable performance, supported by the documentation needed for installation, inspection and long-term regulatory confidence.

Complete doorset solution
Supplied as a coordinated system including door, frame and certified hardware.

Performance upgrades
Options available for acoustic insulation, thermal performance and enhanced security.

Sustainable manufacturing
Produced using low-carbon materials and energy-efficient processes.

Configuration options
Fire-rated vision panels, side screens, hardware and finish choices to meet project needs.

Building confidence in compliant fire protection

Our certified fire-door solutions support safer, more resilient buildings by combining dependable fire performance with sustainable manufacturing and fully documented compliance.

Security doors

Engineered for strength, resilience and protection in high-risk environments

Security doors provide critical protection for assets, people and operational continuity in environments where threats must be managed with confidence. Independently tested to British and European standards, our steel and timber security doorsets deliver verified performance, with resistance ratings up to LPS 1175 SR4 and PAS 24.

Designed to withstand burglary, forced entry and specialist threats, each doorset provides robust physical security while supporting safe, efficient building operation. A broad choice of sizes, finishes and configurations allows you to tailor performance to the needs of each project — from commercial and public buildings to utilities, government and high-risk infrastructure.

Supplied as a complete doorset — including door, frame and certified hardware — each solution is installation-ready and supported by optional upgrades such as ballistic resistance, fire-rating, acoustic insulation and sustainable manufacturing options.

Tested & certified

Independently tested to BS and EN standards with resistance ratings up to LPS 1175 SR4 and PAS 24.

Threat protection

Engineered to resist burglary, blast and ballistic threats for high-risk environments.

Compliance confidence

Meets UK Government, insurance and industry standards for regulatory reassurance.

Versatile applications

Ideal for banks, data centres, utilities, government, commercial and public buildings.

Design flexibility

Available in a wide range of sizes, finishes and configurations.

Engineered to deliver dependable physical protection across high-risk environments.

Complete doorset solution

Supplied with door, frame and certified security hardware for installation-ready protection.

Upgrade options

Ballistic resistance, fire-rating, acoustic insulation and enhanced-security options available.

Sustainable manufacturing

Produced with low-carbon materials and energy-efficient processes.

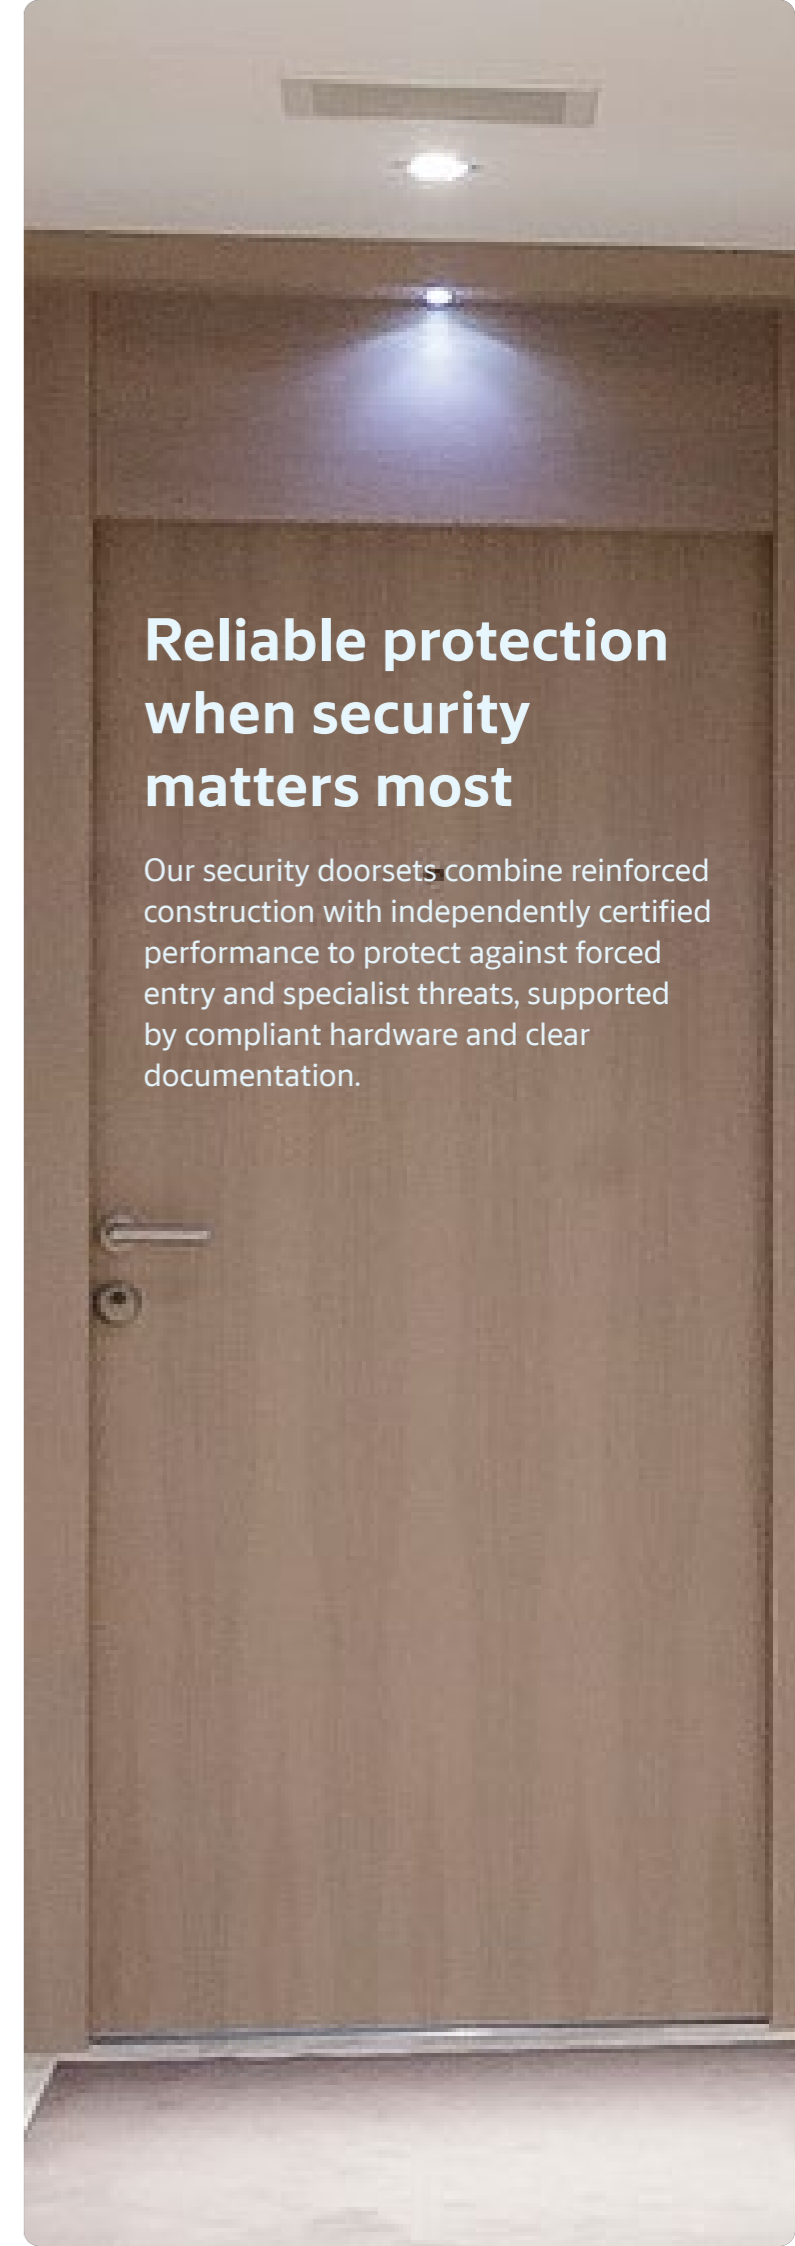

Configuration choices

Wide selection of sizes, vision panels, finishes and hardware to meet specialist requirements.

Reliable protection when security matters most

Our security doorsets combine reinforced construction with independently certified performance to protect against forced entry and specialist threats, supported by compliant hardware and clear documentation.

Personnel doors

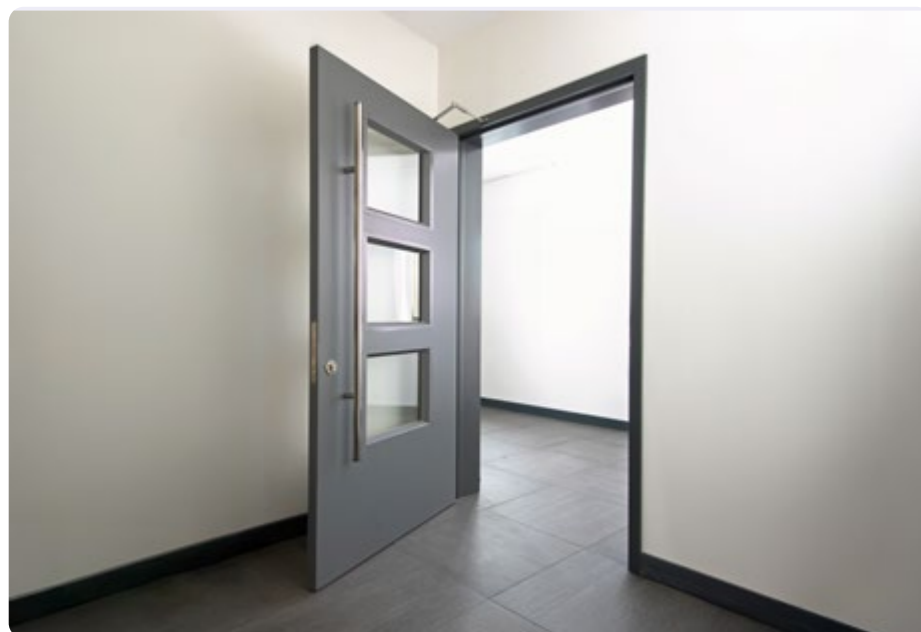

Durable, versatile access solutions for everyday environments

Personnel doors provide reliable, everyday access in environments where durability, safety and ease of operation are essential. Independently tested to British and European standards, our steel and timber doorsets deliver trusted performance across commercial, industrial and public buildings.

Designed to withstand frequent use, each doorset supports efficient circulation throughout busy workplaces while meeting all relevant UK Building Regulations and industry

standards. With options for steel or timber construction, a wide range of sizes, finishes and hardware choices, personnel doors can be tailored to suit the functional and aesthetic needs of any building.

Supplied as a complete doorset — including door, frame and hardware — each solution is installation-ready and supported by upgrade options such as fire-rating, acoustic insulation, thermal performance and security enhancements.

Tested & certified

Independently tested to BS & EN standards for proven durability and performance.

Everyday security

Designed for frequent use in commercial, industrial and public environments.

Compliance confidence

Meets UK Building Regulations and recognised industry standards.

Versatile applications

Ideal for offices, schools, hospitals, retail and more.

Design flexibility

Available in steel or timber with a wide range of sizes, finishes and hardware options.

Our personnel doorsets provide durable, long-lasting performance for everyday use in busy environments. Designed for reliable operation, they combine compliant construction, coordinated hardware and flexible design options to support safe and efficient movement throughout commercial, industrial and public buildings.

Complete doorset solution

Supplied with door, frame and certified hardware for installation-ready use.

Upgrade options

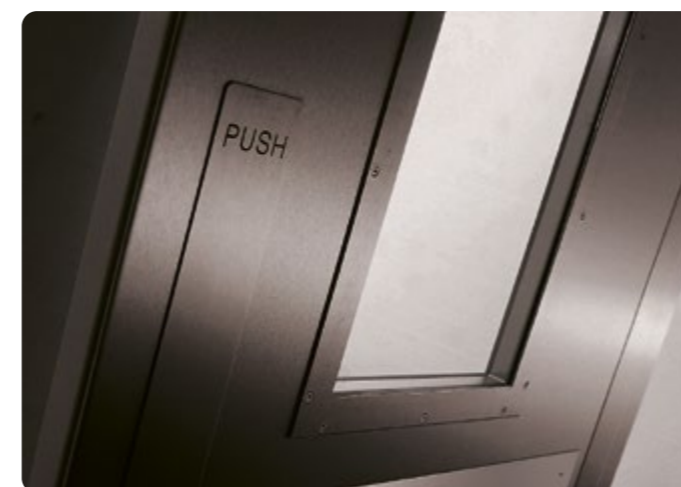

Fire-rating, thermal performance, acoustic insulation and enhanced security available.

Sustainable manufacturing

Produced using recyclable materials and energy-efficient processes.

Configuration choices

Steel or timber options with a wide range of finishes, hardware and glazing choices.

Built for long-term everyday use

Our personnel-door solutions combine durable construction with compliant, installation-ready design to support safe and efficient access across public and commercial environments.

Cleanroom doors

Maintaining hygiene and containment in controlled environments

Cleanroom doors are essential for maintaining hygiene, containment and controlled airflow in sensitive environments. Independently tested to British and European standards, our steel and timber doorsets meet GMP and ISO cleanroom requirements, supporting strict hygiene and contamination-control protocols.

Smooth, seamless designs help prevent dirt and bacteria build-up, supporting easy cleaning and consistent cleanliness. With a wide choice of sizes, finishes, glazing options and hardware, cleanroom doors can be tailored to the needs of laboratories, data centres, healthcare facilities and clean manufacturing environments.

Supplied as a complete doorset — including door, frame and hardware — each solution is installation-ready and supported by optional upgrades such as fire-rating, acoustic insulation and specialist hardware for enhanced performance.

Tested & certified

Independently tested to BS & EN standards and compliant with GMP and ISO cleanroom requirements.

Hygienic design

Smooth, seamless surfaces prevent dirt and bacteria build-up, supporting easy cleaning.

Compliance confidence

Meets strict hygiene and safety standards for pharmaceutical, healthcare and food facilities.

Versatile applications

Suitable for laboratories, data centres and clean manufacturing environments.

Design flexibility

Available in a range of sizes, finishes and glazing options.

Engineered for hygienic, controlled spaces

Cleanroom doorsets are designed to support hygiene, containment and controlled conditions in sensitive environments, helping maintain cleanliness and safe operation across laboratories, healthcare facilities and clean manufacturing areas.

Complete doorset solution

Supplied with door, frame and compliant hardware for installation-ready use.

Performance upgrades

Fire-rating, acoustic insulation and specialist cleanroom hardware available.

Sustainable manufacturing

Produced using low-carbon materials and energy-efficient processes.

Configuration options

Wide range of finishes, glazing options and hardware to suit controlled environments.

Supporting compliance in controlled environments

Our cleanroom-door solutions combine hygienic, easy-clean design with compliant construction to help maintain strict contamination control and meet the needs of GMP, ISO and regulated cleanroom applications.

Acoustic doors

Reducing noise transmission for quieter, more productive environments.

Acoustic doors are designed to minimise sound transfer in environments where noise control is essential. Independently tested to British and European standards, our steel and timber doorsets achieve sound-reduction ratings of up to 45dB, supporting privacy, comfort and concentration in a wide range of settings.

Designed to manage noise in studios, offices, schools, healthcare facilities and performance spaces, each doorset helps create quieter, more productive

environments. With a choice of materials, finishes, glazing options and hardware combinations, acoustic doors can be tailored to meet specific project and acoustic-performance requirements.

Supplied as a complete doorset — including door, frame and hardware — each solution is installation-ready and supported by upgrade options such as fire-rating, enhanced acoustic performance, security features and sustainable manufacturing processes.

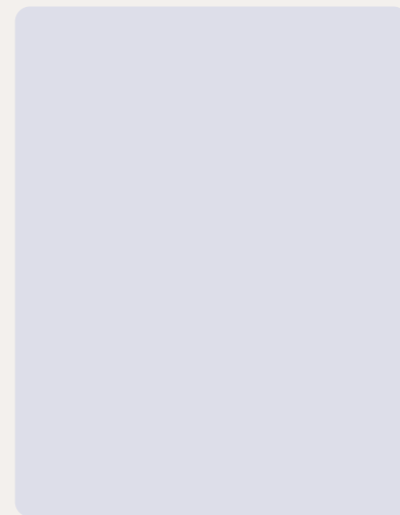

Tested & certified

Independently tested to BS & EN standards with sound-reduction ratings up to 45dB.

Noise control

Engineered to minimise sound transmission in studios, offices, education and healthcare settings.

Compliance confident

Meets UK Building Regulations and acoustic standards.

Versatile applications

Suitable for concert halls, studios, offices, schools and healthcare facilities.

Design flexibility

Available in steel or timber with a wide range of sizes, finishes and glazing options.

Our acoustic doorsets provide certified sound-reduction performance. Tested acoustic ratings, robust construction and tailored configurations help create quieter, more comfortable environments. With tested acoustic ratings, robust construction and tailored configurations, they minimise noise transfer and support privacy, concentration and wellbeing across offices, education spaces, studios, healthcare settings and other sensitive environments.

Complete doorset solution

Supplied with door, frame and certified hardware for installation-ready use.

Performance upgrades

Fire-rating, enhanced acoustic performance and security enhancements available.

Sustainable manufacturing

Produced using recyclable materials and energy-efficient processes.

Configuration options

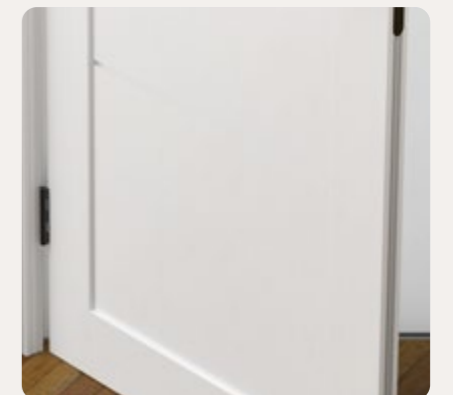

Steel or timber options with multiple finishes, glazing and hardware choices.

Supporting effective acoustic control

Our acoustic doorsets help reduce sound transmission in offices, education facilities, studios and healthcare environments, supporting quieter, more productive spaces.

Designed for comfort and privacy

Certified sound-reduction ratings and tailored configurations deliver dependable acoustic performance where noise control is essential.

Blast & ballistics doors

Protecting people and assets against extreme threats

Blast and ballistic doors are engineered to safeguard people, assets and critical operations in high-risk environments. Independently tested to British and European standards, our steel and timber doorsets deliver certified blast and ballistic resistance to protect against explosive forces and ballistic impact.

Designed to provide robust, high-level protection, each doorset supports the safety, resilience and continuity of critical facilities. A wide choice of sizes, finishes and configurations allows blast and ballistic doors to be tailored to the requirements of defence, energy, secure government, infrastructure and specialist environments.

Supplied as a complete doorset — including door, frame and certified hardware — each solution is installation-ready and supported by sustainable manufacturing processes and optional upgrades such as fire-rating, acoustic insulation and enhanced security features.

Tested & certified

Independently tested to BS & EN standards for blast and ballistic resistance.

High-level protection

Engineered to withstand explosive forces and ballistic impact in critical environments.

Compliance confidence

Meets UK Government, defence and industry standards.

Versatile applications

Suitable for defence, energy, infrastructure, and secure government facilities.

Design flexibility

Available in a wide range of sizes, finishes and configurations.

Engineered for extreme-threat protection, providing certified resistance to explosive forces and ballistic impact.

Complete doorset solution

Supplied with door, frame and certified blast- and ballistic-rated hardware.

Upgrade options

Fire-rating, acoustic insulation and enhanced security features available.

Sustainable manufacturing

Produced using robust, recyclable materials and energy-efficient processes.

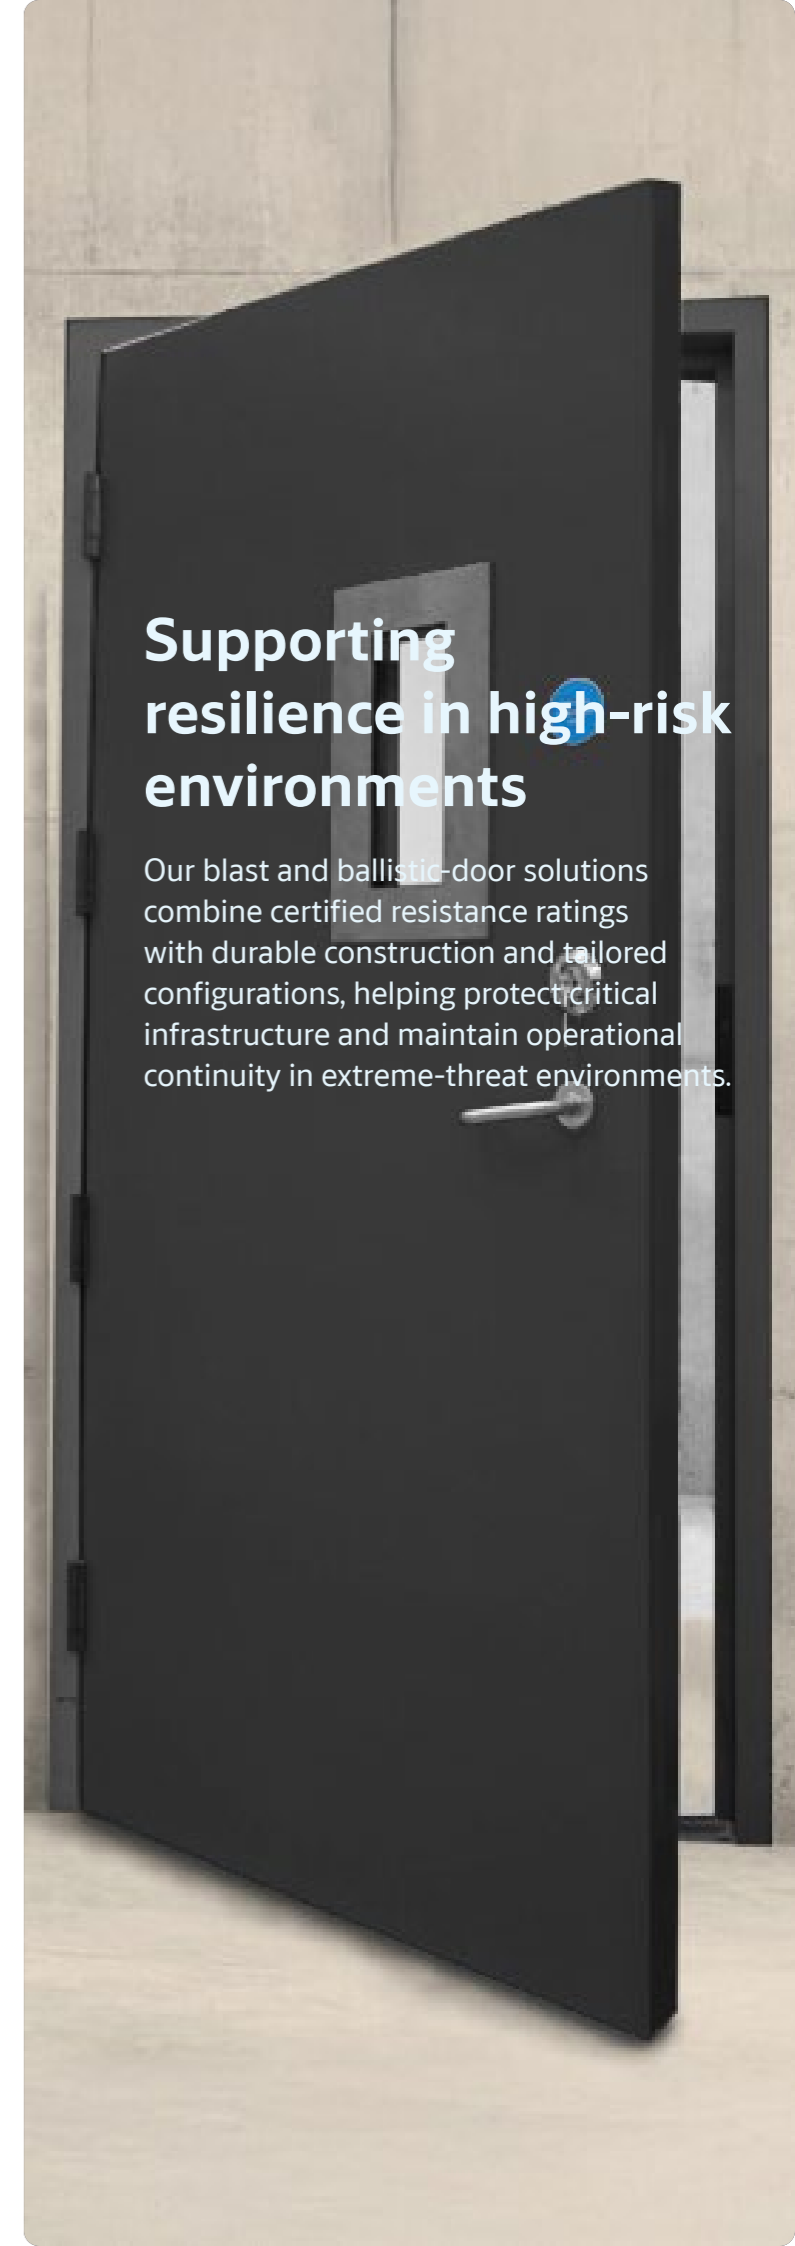

Configuration choices

Offered in a range of sizes, finishes, glazing options and hardware to suit specialist requirements.

Supporting resilience in high-risk environments

Our blast and ballistic-door solutions combine certified resistance ratings with durable construction and tailored configurations, helping protect critical infrastructure and maintain operational continuity in extreme-threat environments.

Glazed doors

Combining visibility with performance and style.

Glazed doors bring natural light, openness and visibility to modern environments while maintaining essential safety and performance requirements. Independently tested to British and European standards, our steel and timber glazed doorsets are available with fire-rated, acoustic and thermal-performance glazing options to support a wide range of building needs.

Engineered with a focus on both form and function, each glazed doorset enhances visibility and creates brighter, more welcoming spaces

without compromising on safety or performance. With multiple glass types, finishes and configurations available, glazed doors can be adapted to suit offices, schools, public buildings and entrance screens.

Supplied as a complete doorset — including door, frame and certified hardware — each solution is installation-ready and supported by sustainable manufacturing processes and optional upgrades such as enhanced acoustic performance, fire-rating and decorative glazing choices.

Tested & certified

Independently tested to BS & EN standards for fire, acoustic and thermal performance.

Visibility & safety

Fire-rated and acoustic glazing options enhance natural light while maintaining safety.

Compliance confident

Meets UK Building Regulations and CE marking requirements.

Versatile applications

Suitable for offices, schools, public buildings and entrance screens.

Design flexibility

Available in steel or timber with a range of sizes, finishes and glazing options.

Glazed doorsets are engineered to enhance visibility without compromising safety, combining certified performance with high-clarity glazing to provide natural light and transparency while maintaining fire, acoustic or thermal protection where required.

Complete doorset solution

Supplied with door, frame and certified hardware for installation-ready use.

Upgrade options

Enhanced acoustic performance, fire-rating and decorative glazing available.

Sustainable manufacturing

Produced using recyclable materials and energy-efficient processes.

Configuration choices

Offered in steel or timber with multiple glass types, finishes and hardware selections.

Supporting safe, light-filled environments

Our glazed-door solutions combine visibility, safety and design flexibility to help create brighter, more open spaces in offices, schools, public buildings and specialist environments, without compromising compliance or performance.

Louvre doors

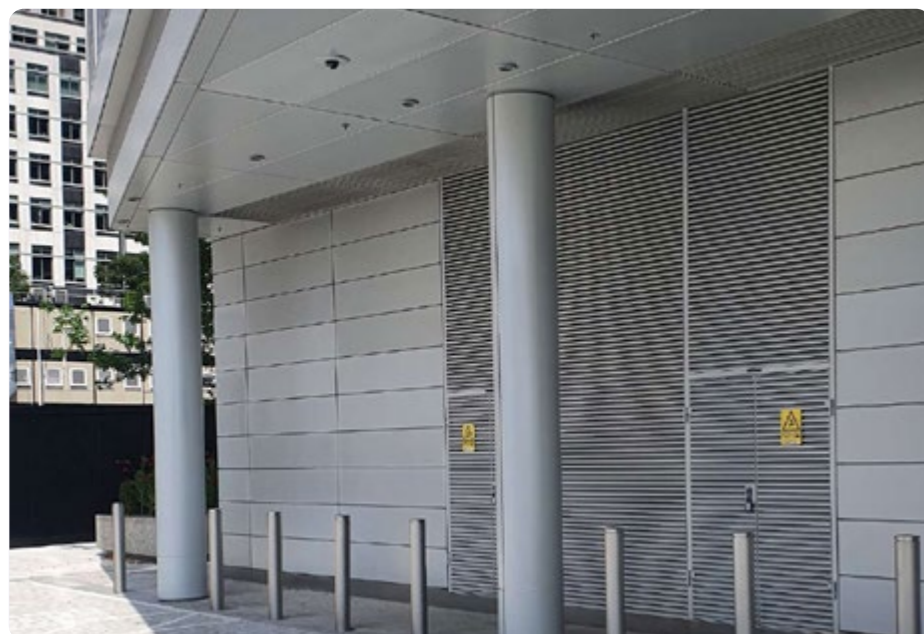

Ventilation with certified security for critical environments

Louvre doors provide secure airflow and environmental control in settings where ventilation and protection must work together. Independently tested to British and European standards, our steel and timber louvre doorsets achieve resistance ratings up to LPS 1175 SR2/SR3, supporting secure ventilation across utility, infrastructure and specialist environments.

Engineered to optimise airflow while maintaining robust physical security, each doorset supports safe and efficient operation in substations, plant

rooms, utilities and other sensitive facilities. A wide choice of sizes, finishes and configurations ensures louvre doors can be tailored to suit project requirements and operational demands.

Supplied as a complete doorset — including door, frame and hardware — each louvre solution is installation-ready and supported by sustainable manufacturing processes, with optional upgrades such as anti-vermin mesh, demountable frames and custom finishes.

Tested & certified

Independently tested to BS & EN standards with resistance ratings up to LPS 1175 SR2/SR3.

Ventilation & protection

Engineered to support airflow and environmental control without compromising on security.

Compliance confident

Meets UK utility, infrastructure and industry standards for peace of mind.

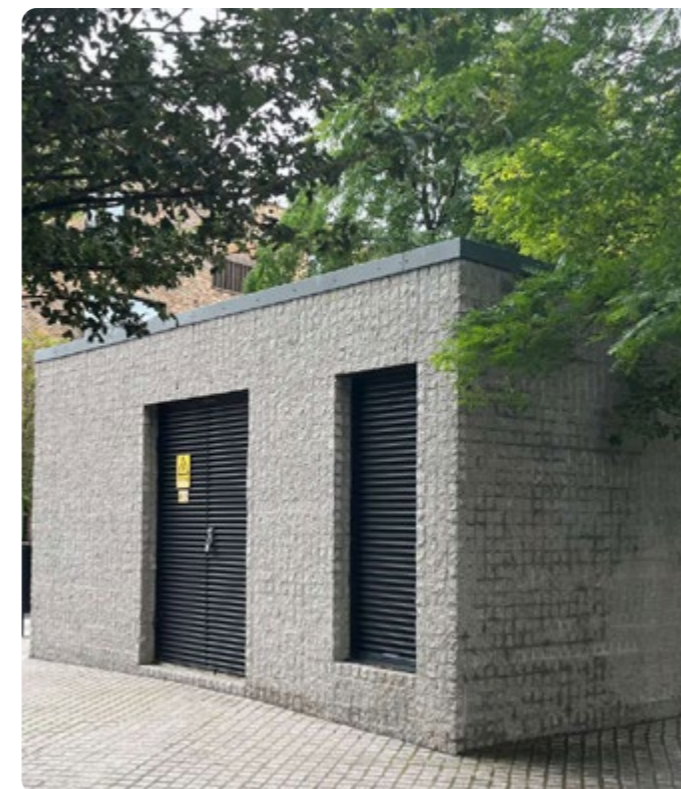

Versatile applications

Suitable for substations, plant rooms, utilities and secure facilities.

Design flexibility

Available in a range of sizes, finishes and configurations.

Louvre doorsets are engineered for secure airflow and environmental control, combining certified security performance with ventilation-focused design to support controlled airflow, protection and operational efficiency across utility, infrastructure and specialist environments.

Complete doorset solution

Supplied with door, frame and certified hardware for installation-ready use.

Upgrade options

Anti-vermin mesh, demountable frames and custom finishes available.

Sustainable manufacturing

Produced with recyclable materials and energy-efficient processes.

Configuration choices

Offered in multiple sizes, finishes and hardware options to suit specialist requirements.

Supporting secure, efficient ventilation

Our louvre-door solutions provide controlled airflow while maintaining certified security performance, helping safeguard utilities, substations, plant rooms and other environments where ventilation and protection must work together.

Designed for critical infrastructure environments

Built to meet UK utility, infrastructure and industry standards, they offer reliable environmental control and tailored configurations for substations, secure facilities and specialist operational spaces.

Sliding gates

Secure access for large-scale environments

Sliding gates provide secure, reliable perimeter control in large-scale commercial and industrial settings. Independently tested to British and European standards, our gate systems offer certified fire-resistance and security options for applications requiring controlled access and robust protection.

Designed for smooth, long-term operation, each sliding gate supports efficient movement of people and vehicles while maintaining high levels of safety and performance. With a wide range of sizes, finishes and configurations available — including single, double and multi-segment options — sliding gates can be tailored to suit car parks, warehouses, factories and logistics centres.

Supplied as a complete system — including frame, panels and hardware — each solution is installation-ready and supported by sustainable manufacturing processes and optional upgrades such as fire resistance, acoustic insulation and corrosion-resistant finishes.

Tested & certified

Independently tested to BS & EN standards, with fire-resistance and security options for perimeter control.

Robust construction

Engineered for smooth operation and long-term reliability in industrial and commercial settings.

Compliance confidence

Meets UK safety and performance standards.

Versatile applications

Ideal for car parks, warehouses, factories and logistics centres.

Design flexibility

Available in single, double or multi-segment configurations with custom finishes.

Engineered for secure, large-scale perimeter control with certified performance for smooth, reliable operation.

Complete system solution

Supplied as a full gate system including frame, panels and certified hardware.

Upgrade options

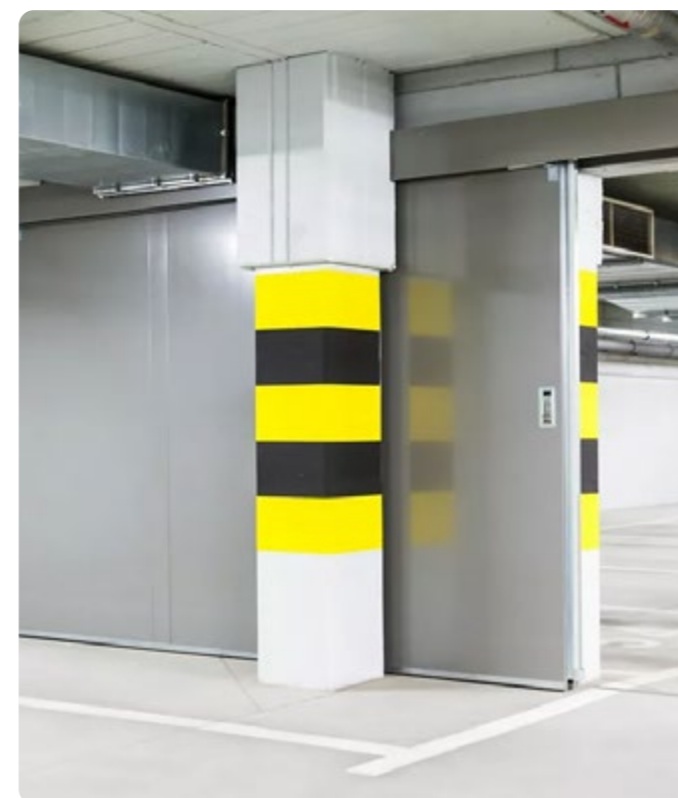

Fire-resistance, acoustic insulation and corrosion-resistant finishes available.

Sustainable manufacturing

Produced with galvanised steel and energy-efficient processes.

Configuration choices

Offered in single, double or multi-segment setups with multiple finishes and hardware choices.

Supporting secure, efficient access across large-scale sites

Sliding-gate solutions combine durable construction with certified performance to support safe movement, perimeter protection and reliable long-term operation across commercial, industrial and logistics environments.

Fire curtains

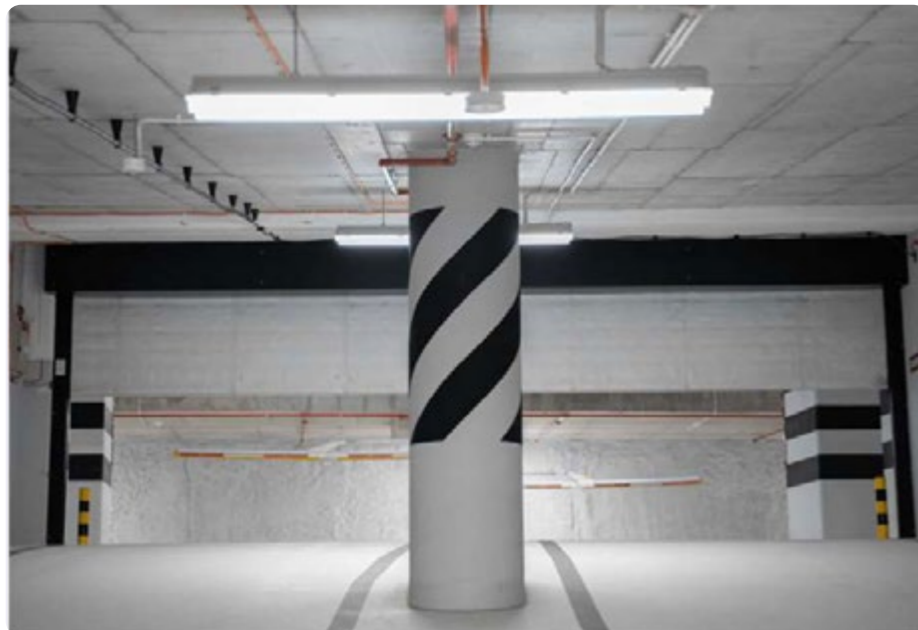

Invisible protection for modern fire compartmentation

Fire curtains provide discreet, automatic protection by activating in the event of fire to help contain flames and smoke. Independently tested to British and European standards, our textile-based systems achieve fire-resistance ratings up to EW120/EI120, supporting modern fire-safety strategies across commercial, industrial and public buildings.

Designed to preserve open-plan aesthetics during everyday use, each fire curtain deploys only when required, supporting safe evacuation routes and effective

compartmentation. Multiple installation options, finishes and control configurations allow fire curtains to integrate seamlessly with complex building layouts.

Supplied as a complete solution, each system includes the curtain assembly, guides, headboxes and certified controls — installation-ready and supported by sustainable manufacturing processes and upgrade options such as electric drive, gravity-based triggers and custom control panels.

Tested & certified

Independently tested to BS & EN standards, with textile fire-resistance ratings up to EW120/EI120.

Flexible fire protection

Automatically deploys during fire events while maintaining open-plan aesthetics in everyday use.

Compliance confident

Meets UK Building Regulations and CE-marking requirements.

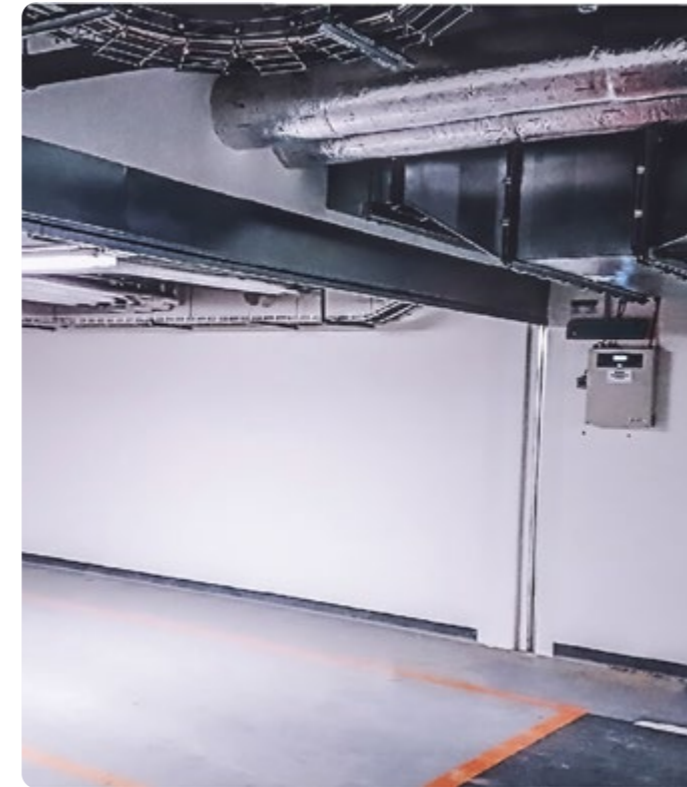

Versatile applications

Suitable for commercial, industrial and public buildings.

Design flexibility

Compact design with multiple installation options and finishes.

Fire curtain systems are engineered for discreet, effective compartmentation, activating automatically to contain fire and smoke when required. Designed to integrate seamlessly into modern building layouts, they remain unobtrusive during everyday use while delivering certified protection in an emergency.

Complete system solution

Supplied with all necessary components for integration with fire-alarm and building-control systems.

Upgrade options

Electric drives, gravity-based triggers and custom control panels available.

Sustainable manufacturing

Lightweight construction using recyclable materials and energy-efficient processes.

Configuration choices

Multiple headbox, guide and finish options for varied installation requirements.

Supporting safe, flexible fire-safety strategies

Our fire-curtain solutions combine certified fire-resistance performance with discreet design and flexible installation options, helping maintain compliant compartmentation and safe evacuation routes across modern buildings.

A digital workflow that unites configuration, pricing, drawings and ordering into one streamlined platform — giving trade partners a faster, more accurate way to specify complete doorsets.

Design4Doors

Faster, more accurate specification

Design4Doors enables trade partners to configure complete doorsets with confidence. Every option is validated in real time for fire, acoustic, security and performance criteria, reducing errors and ensuring designs remain fully compliant before moving into production.

Clearer decisions, simpler workflows

Instant drawings and live pricing updates transform complex door schedules into intuitive, step-by-step decisions. Partners can compare performance options, prepare specifications earlier and progress projects with greater clarity and speed.

Purpose-built for trade efficiency

By centralising configuration, pricing and drawings, Design4Doors helps trade teams manage quotes, approve designs and process orders more efficiently. Automated checks ensure every selection is production-ready and aligned with factory requirements.

Better control and collaboration

With full visibility of each step — from initial configuration to confirmed order — trade partners gain improved accuracy, smoother communication and a more reliable workflow when working with clients, installers and ASSA ABLOY support teams.

Where digital accuracy meets smarter specification

Design4Doors brings configurable design, automated outputs and real-time pricing into one streamlined workflow, helping trade partners specify and order compliant doorsets with greater speed, accuracy and confidence.

Customised configuration

Build complete doorsets with fire, acoustic, security, glazing and hardware options.

Automated technical drawings

Instant, compliant drawings generated directly from your selections.

Real-time pricing

Live quotations for faster decisions and clearer budgeting.

Direct CNC integration

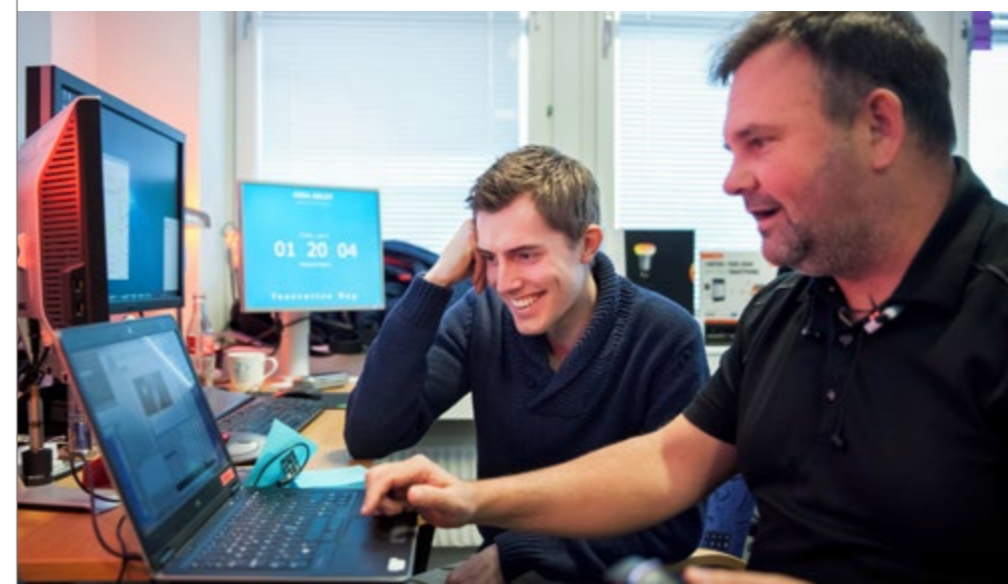

Send approved designs straight to manufacturing.

One-click ordering

Convert quotes into orders in seconds.

Shorter lead times

Optimised workflows accelerate approvals and delivery.

Supporting faster, more efficient trade workflows

Design4Doors helps trade partners specify and order doorsets with greater speed and accuracy. By combining configuration, pricing and compliant outputs into one connected platform, it streamlines approvals, improves coordination and provides a more reliable path from design to delivery.

Openings Studio™

A digital platform that connects design, compliance and job-site documentation into one simple workflow — helping trade partners manage door information accurately from installation through to aftercare.

Digital records that support every job

Openings Studio™ gives trade partners a complete digital passport for every door, providing access to specifications, installation details, inspection reports and compliance information in one place. Using RFID tagging or mobile scanning, partners can instantly retrieve door data without paperwork or delays.

Smarter documentation, fewer disputes

Photos, notes and service records captured on-site provide clear evidence of work completed, helping resolve queries faster and reducing the risk of disputes. By keeping records accurate and up to date, Openings Studio™ supports smoother handovers and long-term accountability.

Practical compliance for real-world projects

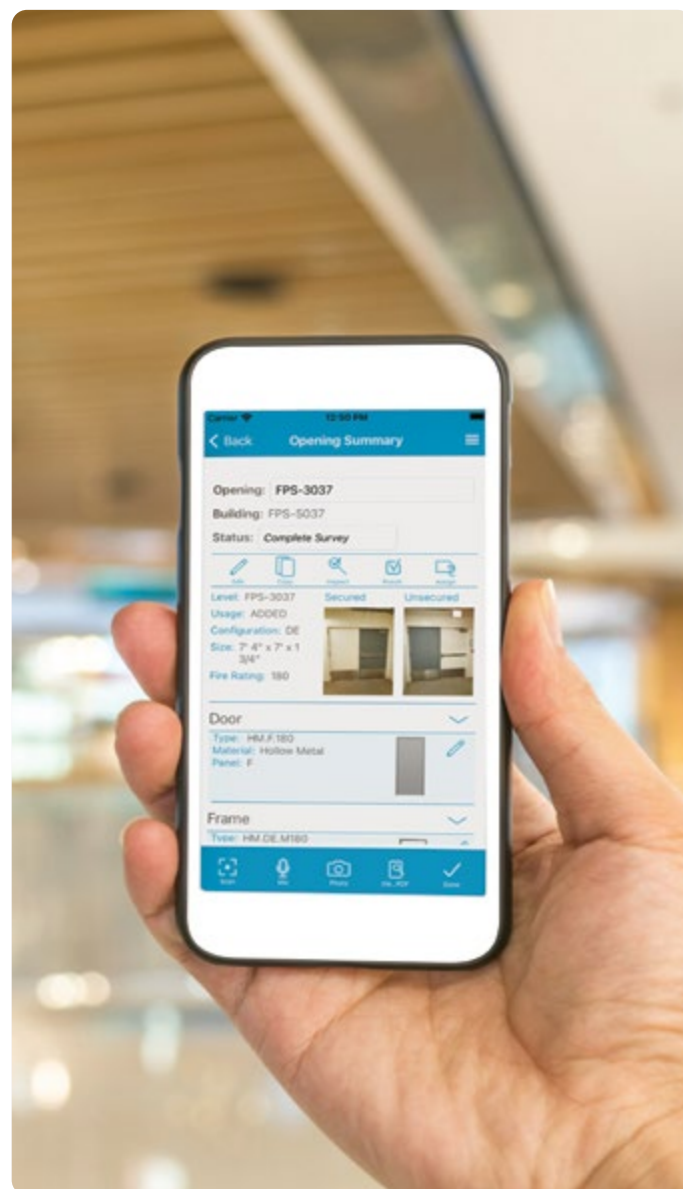

Aligned with Golden Thread requirements, Openings Studio™ ensures essential safety information is captured, stored and accessible throughout the building lifecycle. It helps trade partners meet legal obligations, pass inspections with confidence and demonstrate professional standards to clients.

Designed for trade efficiency

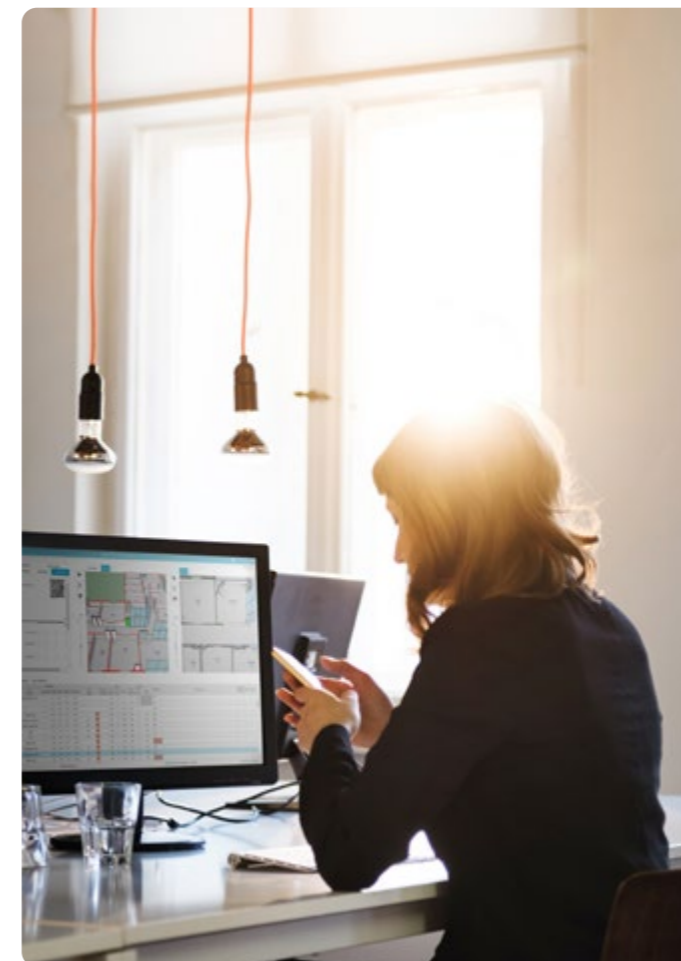

The platform centralises everything — from installation records to maintenance updates — giving partners a single, secure location to manage door information. This supports faster reporting, clearer communication and easier coordination across projects and teams.

Your digital passport for every door

Openings Studio™ keeps every installation, update and inspection linked to a single, secure digital record — giving trade partners instant access to accurate information wherever it's needed.

Digital accuracy that simplifies compliance and aftercare. Openings Studio™ stores verified door information, installation records and on-site updates in one secure platform, helping trade partners manage compliance, reduce paperwork and resolve issues with greater clarity.

RFID / mobile tagging

Every door receives a unique digital ID for instant scanning and tracking.

Photo & record storage

Capture visual proof, inspection notes and service reports for each door.

Compliance dashboard

Instantly access fire, acoustic, security and safety data when needed.

Customer sharing

Send digital reports for client review, approval and peace of mind.

Dispute protection

Clear, time-stamped evidence helps resolve issues quickly.

Mobile access

Use a phone or tablet to update records on-site.

Fast dispute resolution

Time-stamped photos and notes help resolve queries quickly and protect your work.

Improved client confidence

Sharing clear, professional digital reports helps build trust and demonstrates quality workmanship.

Clear, connected information for every project

Openings Studio™ keeps essential door data organised and accessible, helping trade partners capture installations, updates and inspections in one reliable digital record that supports compliance and smoother project delivery.

Partnership tiers

Partner tiers give you increasing levels of support, tools and commercial advantages designed to make projects smoother, faster and more profitable. Each tier unlocks additional resources to help your business grow.

Becoming a Trade Partner is simple, supported and completely free. Whether you're a distributor, contractor or consultant, our programme gives you the tools, expertise and digital platforms to help your business work smarter from day one.

Get started

Your first step towards partnership

Joining the Trade Partner Programme is quick and straightforward. Once you register your interest, our team will guide you through the process and help you understand how the programme can support your business.

Three simple steps to get started

- Register your interest - Visit our Trade Partner Programme page and complete a short form with your business details.

- Speak with our team - A dedicated account manager will contact you to discuss your goals, answer questions and walk you through the programme benefits.
- Start partnering - Once approved, you'll gain access to tools like Design4Doors, marketing support, technical guidance, product training and more.

What you'll receive

Welcome pack with programme details

Access to the Design4Doors platform

Priority support and technical guidance

Co-branded marketing materials

Invitations to training and CPD events

Get started
If you're ready to join, fill out our online form or email us directly for support.

Delivering innovation, security, and performance through high-quality steel and timber door solutions.

As part of ASSA ABLOY EMEIA Door Business Segment, Door Group leads the market in advanced steel and timber doors engineered for safety, compliance and long-term durability.

Who We Are

Backed by global expertise and UK-based manufacturing, we deliver tailored solutions for diverse environments through our trusted brands: Powershield, Prima, Safeguard and SMARTec. Every doorset is rigorously tested, fully certified and built to deliver consistent, reliable performance.

We offer a complete end-to-end service, from product-specific drawings and technical guidance through to manufacturing, installation and maintenance—supporting architects, specifiers, contractors and facilities managers across sectors including healthcare, education, commercial, logistics and government.

Our nationwide Service, Maintenance & Repair teams provide expert support

throughout the building lifecycle, while our accredited Fire Door Inspection service helps maintain safety and compliance. With deep technical knowledge and a commitment to continuous improvement, we deliver dependable products, efficient delivery and professional support.

We remain committed to responsible manufacturing and long-term product performance, helping clients meet both safety and sustainability goals across their buildings.

We also work closely with trade partners, supplying fully certified doorsets and providing the digital tools and support needed to deliver compliant, high-quality installations.

What sets us apart

International Partner

As part of the global ASSA ABLOY Group—operating in over 70 countries with 61,000 employees—we bring world-class expertise in access control, entrance automation, and identification technology to every project.

One of the Market Leading Providers

We are one of the UK's leading providers of door opening solutions, offering everything from mechanical and digital locks to high-security doors and smart access systems—designed to meet the some of the highest standards of safety, performance, and compliance.

High-Performance Doors

We deliver fully certified steel and timber doorsets, backed by DHF and BRE-trained engineers and a dedicated fire door inspection scheme. Our doors protect critical infrastructure including airports, hospitals, and transport networks.

Specification Expertise

Our expert team supports every stage of your project—from design to installation—offering BIM-ready packages, lifecycle cost analysis, and tailored solutions for efficient, sustainable building design.

Trusted Hardware

Our comprehensive hardware range includes mechanical locks, access control systems, fire door safety products, and hands-free solutions—trusted by institutions like Edinburgh University and NHS Trusts across the UK.

World-Class Service

From training and compliance support to maintenance and inspection, our services are designed to give you complete confidence in your door systems—whatever the size or complexity of your estate.

Openings Studio™

Our cloud-based BIM software, Openings Studio™, enables seamless collaboration across the building lifecycle—helping architects, contractors, and facilities managers design, manage, and maintain door openings with precision.

Design4Doors

Our Design4Doors service brings your vision to life with tailored door design support, finish samples, and visual mock-ups—helping you specify with confidence and align aesthetics with performance from the very start.

Every building or estate has its own needs. Finding the right product will depend on an extensive range of factors, the intended use of a building and ease of access through it, the level of traffic passing through a building, future development plans, and so on. Whatever you need, our range of high-quality support services can help. Every day, we help you experience a safer and more open world.

Working together for safer, smarter buildings

We collaborate with architects, contractors and facility teams to ensure every doorset meets the performance, safety and compliance needs of modern buildings. Our trusted expertise supports confident decision-making at every stage of a project.

Putting quality and service at the heart of every project

With UK-based manufacturing, certified products and dedicated support services, we deliver reliable solutions designed to perform. Our commitment to quality, clarity and long-term partnership ensures better outcomes for clients and end users alike.

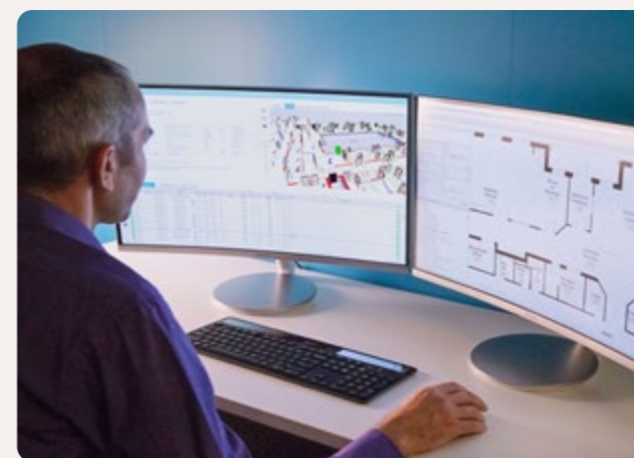

Tailored services for every project

Every project has different needs. Our tailored services combine technical support, specialist expertise and practical guidance to help you design, deliver and maintain high-performance door solutions. Across specification, project delivery, training and aftercare, we provide clear, consistent support at every stage.

Architectural specification

- Help you create compliant and accurate schedules.
- Prepare specification briefs and streamline the process to help mitigate potential risk.
- Design complete door opening solutions for all applications and security requirements.

Project management, design and construction

- Complete technical support service tailored to your project needs.
- Support day-to-day practical demands of your environment.
- Translate architectural design and performance expectations into reality.

Training courses

- RIBA-accredited training provider offering individual or combined CPD courses for architects.
- Deliver product training and education programs tailored to your specific needs.
- Share knowledge and expertise to give you a competitive edge.

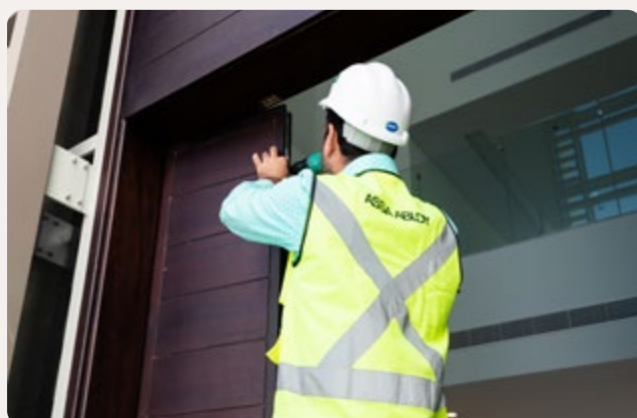

Testing & Accreditation

- Integrity, ingenuity, and innovation—meeting the highest technical standards.
- Custom-built UKAS performance testing laboratory.
- All products independently tested with third-party accreditation.
- In-house facilities ensure consistent quality and compliance.

Master Key Consultancy

- A suite for every scenario, no matter the size or scale of your site.
- Patented protection with unique features for greater security and authorised key cutting.
- Enables buildings to satisfy security and access needs with greater control.

Service & Maintenance

- Aftersales solutions for end users and facility management companies.
- UK-wide coverage for fast, reliable support.
- Maintenance contracts include regular inspections, priority calls, and discounts on repair work.

Fire door inspections

- Regular inspections to ensure health and safety compliance.
- Digitised fire door inspection software via mobile app for accurate reporting.
- Identify potential issues impacting safety and performance.
- Provide detailed reports with advice and recommendations for improvements.

Surface repairs

- Expert solutions to restore and protect your doors.
- Repair scratches, dents, and surface damage for a professional finish.
- Revive coatings and finishes for a like-new look without costly replacements.
- Ensure compliance with fire and safety standards where applicable.

Built on trust & expertise

Global expertise

Decades of proven leadership in access solutions worldwide

Trusted security

Reliable, certified solutions built to protect people and places

Smarter innovation

Technology that enhances safety, efficiency and user experience

Support that lasts

Guidance, service and care throughout every stage of your project

Delivering confidence in every project

We bring together certified quality, proven capability and trade-focused support to help you deliver safer, smarter and more reliable doorset installations for your customers.

Empowering safer, smarter buildings—with support built for trade partners

Certified performance

Independently tested doorsets built to rigorous fire, security and performance standards, giving trade partners confidence in every installation.

Integrated capability

Technical guidance, manufacturing expertise and installation support delivered by one trusted team throughout the project.

Digital accuracy

Smart tools like Design4Doors and Openings Studio™ enhance specification, streamline compliance and reduce project risk.

Reliable support

Responsive service and expert advice available before, during and after installation to help keep every job running smoothly.

Expertise you can rely on

Our Trade Partner Programme is built around reliable performance, specialist tools and a commitment to supporting your success on every job. From specification accuracy to on-site documentation and compliant installation, we provide the guidance and support you need to deliver doorset solutions that perform.

Partner with us for
confident, compliant
doorset delivery.
